THRASYMACHUS

OR

THE FUTURE OF MORALS

CHAPTER I

MORALITY AS THE INTEREST OF THE STRONGER

Thrasymachus appears in the first book of Plato's *Republic*, in which the speakers discuss the nature of Justice. Several tentative definitions of Justice are given, which Socrates has no difficulty in showing to be inadequate by the peculiarly irritating methods of dialectic, for which the Athenians so excusably poisoned him. Thrasymachus then breaks in. He is a blustering, overbearing personage, who makes long speeches instead of answering Socrates' questions, and, when driven into a corner, charges the latter rather irrelevantly with having a bad cold and omitting to use his handkerchief.

Required to sustain an unpopular thesis, he is not unnaturally represented as an offensive person. The trick is an old one and argues well for Plato's sense of dramatic fitness. It should not, however, blind us to the plausibility of

THRASYMACHUS

Thrasymachus' position. Justice, he says, is the interest of the stronger. Asked how he maintains this view, he points out that the stronger control the government and make the laws. These laws are not unnaturally made in their own interest; in other words, matters are so contrived that, by the mere process of obeying the laws, citizens are led to further the interests of those who govern them. Morality, which is the name we give to law-abiding conduct, is, therefore, a device on the part of the rulers to ensure subservience and contentment on the part of their subjects. Since subservient subjects are a joy and a credit to intelligent rulers, we may say that justice, and indeed morality in general, is the interest of the stronger.

The view that morality is unnatural to human beings and is imposed by law in the teeth of primitive instincts which are fundamentally non-moral, recurs at pretty regular intervals throughout the recorded history of what passes for human thought. It rests upon what is called the social contract theory of society, and leads to the conclusion that human nature is fundamentally wicked.

The life of man in a state of nature was, as the philosopher Hobbes tells us, "solitary, poor, nasty, brutish and short". His hand was against his fellows and every man's

THE FUTURE OF MORALS

hand was against him. Men acted offensively¹ towards each other as and when they pleased, and were restrained by nothing but fear for their own safety. Finding this state of affairs intolerable, men agreed to renounce their natural right to act offensively towards their fellows on condition that their fellows made a similar concession as regards themselves. The best thing of all, of course, was to do what you liked to others without their having the right to retaliate. Since this seemed impracticable, the next best thing was to renounce the full liberty to do what one liked, seeing that it was attended by the obviously unpleasant consequence to oneself of a similar liberty in others, and to venture only upon those actions that the law allowed. Society then was a *pis aller*. Your neighbour, it was true, could not harm you, but then no longer could you work your own sweet will upon your neighbour. Men lived at peace with one another, not because they were naturally peaceable and law abiding, but because they feared the consequences of being

¹The term 'acting offensively' in this connection is used to cover primitive conduct of the kind which is supposed to attract wicked and violent men, as, for example, carrying off your neighbour's wife, raping his daughter, stealing his spoons, bashing in or otherwise mutilating his face, and so forth.

THRASYMACHUS

found out if they were not. Once that fear of consequences was removed, they would revert to their primitive, natural wickedness. Let a man, for example, learn how to become invisible at will and, as Plato points out, no virgin would be safe, no strong box unrifled. Man, then, is made moral by law ; he is not moral by nature.

Now the man who makes the laws is in one sense like the man who has learnt how to become invisible. I do not mean that he can break the laws with impunity, but he can see to it that he has no incentive to break them. Thus we have the majestic impartiality of the modern law which forbids rich and poor alike to sleep in doorways. He can also, as Thrasymachus points out, ensure that, so long as others keep them, his own power will be automatically safeguarded. And, since the law is at once the prop and the mirror of the public opinion of the community, and, since the public opinion of the community is in matters of conduct at once the guardian and the arbiter of conventional morality, we may further say that the habit of acting in a way of which the public opinion of the community approves will be found to conduce to the maintenance of the status quo, and hence to the interests of those whom the status quo suits.

THE FUTURE OF MORALS

In the early eighteenth century Bernard Mandeville revived and elaborated the doctrine of Thrasymachus. Society was devised by skilful politicians for their own advantage. This they hoped chiefly to secure by the spread of what was called morality. Addressing themselves therefore, to men's pride, they pointed out that man had always considered himself to be superior to the brute beasts. Yet, if he indulged his passions as soon as he conceived them, and gave way alike to sensual desire and violent rage, wherein did his superiority consist? Surely in order to demonstrate their superiority men must learn to master their appetites and restrain their passions. The plain man listened to the words of the flatterer, and, aspiring to live the higher life, transformed himself from a savage into a clerk. The process is known as civilization.

Tamed by his own conceit, man was now fit to live in society. As a social animal he regards as virtuous every action on the part of others by which the society to which he belongs is benefited, and stigmatizes as vicious the indulgence of private appetites irrespective of the public good.

But the skilful politicians who had planned the thing from the beginning, had taken good care to ensure that the

THRASYMACHUS

good of society should be identical with their own advantage. Uncivilized man is ungovernable man, but man tamed and tractable, with the bees of social virtue and social service buzzing in his citizen's bonnet, is at once the prop and the dupe of unscrupulous governments. "From which," as Mandeville says, "it is evident that the first rudiments of morality broached by skilful politicians to make men useful to each other as well as tractable, were chiefly contrived that the ambitious might reap the more benefit from, and govern vast numbers of them with the greater ease and security."

To those who object that morality was invented by God and not by politicians, and that the sanctions of right conduct are derived not from social utility but from divine ordinance, it should be observed that God himself is the most potent instrument yet devised for securing the performance of conduct beneficial to the stronger. This at least is true of the great bulk of the gods who have figured in history. On this point perhaps it would be best to let the stronger speak for themselves. Napoleon may be taken as a suitable representative.

"What is it," he writes, "that makes the poor man think it quite natural that there are fires in my parlour while he is dying of cold? That I have ten coats in

THE FUTURE OF MORALS

my wardrobe while he goes naked? That at each of my meals enough is served to feed his family for a week? It is simply religion which tells him that in another life I shall be only his equal, and that he actually has more chances of being happy there than I. Yes, we must see to it that the floors of the churches are open to all, and that it does not cost the poor man much to have prayers said on his tomb." Thenceforward, though an avowed free thinker, Napoleon set his face sternly against anti-Christian and anti-clerical legislation.

The moral is sufficiently obvious. Men whose lives are miserable and oppressed will either rise in revolt against their misery and servitude, or console themselves with the prospect of generous compensation hereafter. If steps are taken to ensure that their faith is sufficiently lively, they will look to the next world to supply them with the divine equivalents of the champagne and cigars they are missing in this one, an expectation which confers obvious advantages upon those whom it enables to monopolize the champagne and cigars. Tack on the further belief that riches and power in this world are the best guarantees of torment and anguish in the next, and the utility of religion to "the stronger" is sufficiently manifest. The parable of the needle's eye

THRASYMACHUS

and the story of Lazarus have been responsible for a political and social quietism among the many, which do credit to the political acumen of the early governing class realists who slipped them into the text of the New Testament, and whenever that quietism has showed signs of giving way, a religious revival or the endowment of a church has usually been found the most effective method of dealing with the situation.

“In 1818 one Englishman out of seven being at that time a pauper, Parliament voted a million of public money for the construction of churches to preach submission to the higher powers. In the debates in the House of Lords, Lord Liverpool took occasion to lay stress on the social importance of guiding by this means the opinions of the masses who were for the first time beginning to receive education.”¹ God, it seems, is cheaper than a living wage, and no less effective as a means of securing social contentment.

To its superior utility in this respect we must in part attribute the success of Christianity. Of all religions known to man it lays the greatest stress upon those virtues whose practice is advantageous to the stronger. It glorifies weakness and sentimentalizes over failure; its heaven

¹ *The Town Labourer*, by J. L. and Barbara Hammond.

THE FUTURE OF MORALS

is for the submissive and the inefficient, its hell for the dominant and the proud. Just as the charitable worker takes the revolutionary edge off poverty by distributing coal and blankets to the victims of acute industrial distress, so the priest promotes submissiveness by inculcating the duties of sobriety, meekness, unselfishness, honesty and contentment. These virtues make good workmen and prosperous employers, and, if they are only developed to a sufficient degree, will enable their fortunate possessors cheerfully to put up with bad wages, long hours, wretched houses and social servitude. The contrary virtues of manliness, self-reliance and independence springing from a spirit passionately resentful of injustice, quick to resist an injury and idealistically determined to make a better place of this world instead of waiting passively for the next one, are discouraged as savouring of pride and self-sufficiency, and as showing a reprehensible tendency to look for help to oneself instead of to God, our helper in time of trouble. The rich, to be sure, possess these virtues; but then the message of religion is *from*, not *to* the rich.

But Thrasy-machus has yet one more observation to make to us before we leave him to turn to the future. The penalty of law breaking on a small scale is prison,

THRASYMACHUS

and of trivial wickedness, social ostracism. But what of law-breaking on a large scale, and a wickedness powerful enough to flout the public opinion to which others succumb? These are the qualities of the stronger and they reap the stronger's reward. The rebel is the patriot who fails, the patriot is the rebel who prevails. This is the lesson of the past, and those who read it may learn that if only they are strong enough to succeed, they need not trouble themselves about the respectability of their credentials. Nor has the position altered to-day. The man who steals a leg of mutton goes to prison for a month; the captain of industry grown rich on the profits stolen from his workmen gets a knighthood. The man who has murdered the wife who has annoyed him gets hanged for his pains; the man who kills his fellow men for nourishment is denounced as a cannibal, but the great general who plans the death of vast multitudes of his fellows whom he has never seen, with whom he has never exchanged a cross word and whom he does not require for purposes of sustenance, is hailed as the saviour of his country.

Thus those who commit injustice yet have the wit or the good fortune to escape the consequences of their actions climb into the seats of the stronger and share their immunity from moral restrictions. Since, in the mere process of gratifying

THE FUTURE OF MORALS

their tastes, they are enabled to give employment to large bodies of their fellows, they are accounted public benefactors whose wealth constitutes a social asset. And, should vestiges of the morality of the weaker, from whose ranks they have risen, assail them in the form of conscience, they discover that even the gods can be squared and that a liberal support of deserving charities, coupled with the occasional endowment of a church, are calculated—so they are assured—to procure for them as honoured a place in the hereafter as their own successful injustice has obtained for them in the present.

Thus Thrasy-machus' phrase "morality is the interest of the stronger" has a double significance. In the first place, it defines the morality of the many as that kind of conduct which promotes the interest of the few; in the second, it assures to the successful few the honourable reputation, the social consideration and the good repute among their fellows, which are commonly supposed to be the rewards of morality.

CHAPTER II

HERD MORALITY AND THE NEW TYRANNY OF THOUGHT

The statement of general principles in the preceding chapter was not undertaken solely for the pleasure of political and ethical speculation. My concern is a more practical one. If the principle that justice is the interest of the stronger, is the explanation of what passes for morality, what, I wish to ask, is its application in the present and what is it likely to be in the immediate future?

In order to answer these questions we must first consider a further one. Who in a modern community is the stronger?

The fact that we are a democracy has not escaped notice. In our own day it is not kings, nobles, soldiers, prelates, politicians, or elected persons who are the stronger, but the common man, the plain man, the average man, the man in the street, whether city man or working man, and the crowd or herd of such men. He, or rather his female counterpart, since she is more numerous even than he is, is the arbiter of morality, and the

THRASYMACHUS

kind of conduct which is called moral is that which is convenient or pleasing to her.

Plato with his usual acumen foresaw the possibility of this development, and was careful to provide for it within the bounds of Thrasymachus' formula. All that it is necessary to do if we wish to apply the formula to a democracy is to invert it; for 'stronger' read 'weaker', and the formula remains unaltered. The practicability of this inversion is demonstrated by one, Callicles, in the Dialogue called *Gorgias*. Most men are stupid, irresolute, apathetic, mediocre, timid, and unimaginitive. The qualities implied by these epithets, though discernible at all times, force themselves most pressingly upon the attention when men act together. Take a sheep and stand it on its hind legs and its resemblance to a human being is scarcely noticeable; but stand a flock of sheep on their hind legs and, so far as psychology and behaviour go, you have a crowd of men. In other words, taken severally men may be individuals; taken together they are a mere transmitting medium for herd emotion. Their individual stupidities are added together, but their individual wisdoms cancel out.

In a democracy, says Callicles, the common men are the more numerous,

THE FUTURE OF MORALS

they also possess the power; acting, therefore, in accordance with their natures, they make the laws which their natures demand. Now it is natural for every man to wish to obtain as much as he can. It is also inevitable that in a state of nature the stronger should obtain more than the weaker. Hence the weaker, acting in self-defence, so frame the laws that the endeavour of one individual to obtain more than the many is stigmatised as unjust. Hence justice, or morality, which is now revealed as the interest of the individually weaker but collectively stronger, may be regarded as their device for depriving the stronger of the preponderance of good things, which the strongers' superior talents would naturally procure for them.

What we may call herd morality is therefore a form of self-defence dictated partly by fear, and partly by envy. The source of the fear is obvious; the envy springs from the natural spite of inferior persons who are conscious of their inferiority, resent it, and wish to take it out of those who make them feel it. "I have not", says the average man, "the capacity of the strong man for acquiring a large share of the good things of life. Therefore I will take advantage of my numbers to lay it down that such acquisition is wrong and unjust." The

THRASYMACHUS

common view of self-denial may be taken as an illustration. The average man has neither the courage nor the strength to satisfy his desires and indulge his passions. Being unaccustomed to moderation he thinks that if he permits himself any indulgence he will be unable to stop. He dare not bend for fear he break. Hence for the Greek virtue of temperance we get the modern praise of self-denial, with a resultant standard of morality, which denounces all bodily indulgence as wrong. Upon the basis of this standard of morality the principle of sour grapes proceeds to operate on a large scale. The man who is not rash enough to take sexual pleasure when he finds it, the woman who is not attractive enough to have the opportunity of being rash, combine to denounce the delights at which the independent and the charming are not afraid to grasp.

Herd morality, which is based on fear and envy, is made effective by blame. In modern society the power to blame is chiefly expressed in two ways. First, by the old whose morality consists in blaming the young; secondly by the average whose censure descends upon the exceptional.

Upon the part played by the old in maintaining morality I do not wish to dwell, since it differs little to-day from what it has always been. A mistake

THE FUTURE OF MORALS

which all societies have made is to entrust the management of their affairs to the old. Old men are naturally more vindictive, bad tempered, malevolent, and narrow-minded than young ones. They are easily provoked to disapproval, and dislike more things than they like. Having for the most part lived their own lives, they have nothing left to do but to interfere in the lives of others. They form the governments, misrepresent the people whom they oppress, preach to the people whom they exploit, and teach the people whom they deceive. They mete out rewards and punishments, sentence criminals to death, direct businesses, make laws which they have no temptation to disobey and wars in which they do not propose to fight. If the country were handed over exclusively to the governance of men under thirty-five, and everybody over that age were forbidden to interfere on pain of being sent to the lethal chamber, it would be a happier and a better place. Unfortunately the young men are too busy trying to make a living in the subordinate positions to which the old men grudgingly admit them to have the time or energy to interfere with other people. Besides, being young, they wish to live, a process for which the regulation of the lives of others is a poor substitute.

In the sphere of morality the function

THRASYMACHUS

of the old is confined to discovering methods of deterring the young from pleasures of which they themselves are no longer capable. Old men give young men good advice, no longer being able to give them bad examples, and old women invent a symbolic Mrs Grundy to intimidate their daughters into resisting the temptations which now pass them by. The deterrent influences so exercised are called morality under which name they impose on the young who will not have caught their elders lying often enough to disbelieve them, until they have begun to produce sons and daughters of their own, by which time they will be only too ready to abet the prevailing hypocrisy.

The other strand in the fabric of modern morality has already been noticed as the tendency of the weaker to get even with the stronger by taking it out of him on moral grounds. Morals, it is thought, are everybody's privilege and everybody's possession. Few of us can understand Einstein's theory of relativity, but we all know the difference between right and wrong. Hence the man who is deficient in talent can make up for it in virtue, and, by assuring himself that God's noblest work is an honest man, put brains and capacity in their proper place.

Since the motives which have prompted its invention persist unchanged, morality,

THE FUTURE OF MORALS

which has always been the special emanation of the herd, varies little in spite of superficial differences from age to age, whilst intellectuality throws off new lights in every age. There is probably very little difference between the crowds of ancient Babylon and modern Clapham, but the mind of Einstein differs in radical particulars from that of Archimedes.

Realizing that any fool can be good intellectuals have always made light of morality for the same reasons as those which have caused the herd to set store by it. If the herd has been ready to censure the eccentrics, the eccentrics have been even readier to provide materials for censure. Despising the mob, they flout their standards and laugh at their scruples. The good are so harsh to the clever, the clever so rude to the good, that one might almost be tempted to believe in a fundamental antipathy between virtue and brains. Whether this be so or not, it seems probable that there is a permanent necessity in our natures requiring us to exalt the common qualities we share and understand, and to condemn rare gifts. Thus morality represents the average man's attempt to console himself in the face of the insulting superiority of the few, by proving that the superiority is achieved only at the cost of loss of virtue. Certainly we must take it out of

THRASYMACHUS

these fellows somehow ! It tortures our self-respect to admire those who have qualities we cannot possess. That is why we love to think of the philosopher as an absent minded fool, incapable of feeding himself, writing cheques or catching trains, and listen so greedily to the legends of vice and voluptuousness in men of genius.

Wickedness in high places is so much more appetising than wickedness in low , it enables us to prove that those who are inconsiderate enough to rise above us in place and power, only do so at the cost of falling below us in simplicity and virtue. The public lips have recently been smacking over the details of a case in which it was alleged that a wife endeavoured to advance the career of her husband by a liaison with the Quarter Master General of H M Forces. It was further alleged that the husband condoned and even encouraged her conduct. The Quarter Master General was a man of marked ability. His organizing and administrative capacity were justly famous ; he was, in fact, one of the few brilliant successes of the War. When the rumour spread that this man, one of the most powerful as well as the ablest in the land, had been willing to advance a subordinate because he desired his wife, the outburst of public indignation

THE FUTURE OF MORALS

in the press was tremendous. Wickedness in high places was a glorious theme: there had been nothing like it since the Armistice. Labour bodies met to insist on the superior purity of the lives of working-people, and parsons thundered in their pulpits against the luxury of the rich. For several weeks the Dennistoun case was the chief subject of conversation in trains, 'buses, and bar-parlours, and those whose lips smacked the most greedily over the luscious scandal were the most severe in their condemnation of the vices of society.

Why was it that this case attracted so much attention? Why was the wickedness involved considered so shocking? Why did those who would not have looked twice at the six-line paragraph describing a similar occurrence in the remoter suburbs, follow every detail of the case with the most avid curiosity? Because the woman was unusually beautiful, the man unusually powerful and talented. The beauty of the woman aroused the envy of other women, the power and talents of the man excited the envy of other men.

We all of us have an impulse to blame those whom life has more generously gifted or more fortunately bestowed than ourselves. We make a virtue of our deficiencies, argue that only the dull and

THRASYMACHUS

lowly are good, and call the feeling of envy which we experience for those who are neither dull nor lowly moral indignation.

In addition to the envy of the old for the young and of the herd for the exceptional, the impulse to blame, which men call morality, owns another source. This is the desire for uniformity. The desire for uniformity springs in its turn from the fear of insecurity. Society, said Schopenhauer, is like a collection of hedgehogs driven together for the sake of warmth. The object of social observances is to put felt upon the spikes in order that the proximity of the hedgehogs may not cause them to injure one another. The risk of friction will be reduced to a minimum if all the hedgehogs behave in the same way. Identical behaviour in all circumstances is, no doubt, an unattainable ideal, but this makes it doubly important that the herd as a whole should know within limits in what way each of its members *will* behave. Those who react unexpectedly to familiar situations, or differ markedly in their conduct from others are a danger to the herd, causing social friction and a sense of insecurity. For this reason reformers like Christ or Ibsen, who violently question the standards of thought and conduct prevalent in their herd, are

THE FUTURE OF MORALS

refuse to conform to them, are regarded with bitter hostility.

The method by which the herd secures the uniformity of conduct upon which its comfort and security depend is the exercise of social approval and disapproval. In extreme cases this method is forcibly employed. The soldier who shows a tendency to run away, under the enemy's fire endangers the safety of his fellows. Steps are accordingly taken to check this tendency by the pressure of social disapproval in the form of discipline. Discipline is a device for substituting the certainty of being shot for those who do not go over the top for the probability of being shot for those who do. The result is that most soldiers go over the top. This is conduct conducive to the safety of the herd, and is rewarded with social approval under the name of courage.

More usually social approval and disapproval find expression in the sphere of manners and modes. In Japan under the old laws the term for a rude man is "other than expected fellow", and a noble is not to be interfered with in cutting down a fellow who has behaved to him in a manner other than is expected. In general, thought or conduct calculated to surprise or disturb the herd incurs disapproval and is called immoral; thought and conduct which mirrors the

THRASYMACHUS

beliefs and habits of the herd is regarded with approval and is called moral. Thus virtue is the habit of acting in a manner of which other people approve, vice in a manner of which they disapprove.

Summing up, therefore, we may say that social morality in a democracy springs from the envy of the average man for the talents of the able man which cause him to feel inferior, and from the dislike of the herd for the conduct of the eccentric which makes it feel unsafe.

These are general principles and are more or less applicable in any state of society which is not a tyranny or a close oligarchy. What I wish to emphasize is their special application to a modern western democracy.

In a community of this type the herd is at once more congested and more powerful than it has been in any other period of history. Its congestion causes it to place a hitherto unparalleled emphasis upon the necessity for felting the spikes of the hedgehogs, that is to say, upon the importance of uniformity; its power enables it to vent its disapproval upon those who offend its prejudices with the maximum effect. This can be seen most clearly in the case of America which has produced the most congested¹ and the

¹ The word 'congested' is used to denote the oppression of spiritual stuffiness rather than of physical overcrowding.

THE FUTURE OF MORALS

most powerful herd on record. America is a melting pot in which all the races of the earth are fused. The natural diversity of its elements produces a special need for artificial uniformity in its citizens. A civilization with its roots in the earth can allow its members to spread outwards, like the branches of a tree ; a civilization, whose seeds are planted in shallow soil, must hedge them about lest they be scattered by the wind. The first is centrifugal : it can tolerate individuality because it has a centre. The second is centripetal : it must enforce uniformity because it has none.

For this reason all American citizens strive to be exactly like each other, and, on the whole, they succeed. They have the same clothes, they live in the same houses, they have the same social habits, the same respect for money and the same suspicion of such superfluous eccentricities as thought, culture, and art.

A friend of mine, who had wintered in a Southern State, as the season advanced discarded his felt hat for the regulation straw. A few weeks later he had occasion to travel northwards to New York. As he left the train he noticed that he was an object of attention to people on the platform. Porters and loungers stared, and as he walked away from the station, he found himself followed

THRASYMACHUS

by a small and apparently hostile crowd. Hailing a taxi, he drove to his hotel. In the porch he met an acquaintance, told him of the notice he had attracted, and asked the reason. His friend explained the matter by pointing to his straw hat. It was too early in New York for the change over into straws, he said, and of course one could not dress differently from other people.

The rigid enforcement of uniformity is hostile not only to freedom of action but also to independence of thought. The laws against teaching or holding doctrines displeasing to the majority are particularly severe in America. Immigrants, for example, are not allowed to land in America until they have first expressed their disbelief in Communism, atheism and free love. Many people are put in prison for holding unpopular views, although these views do not apparent harm to anybody. Advocacy of birth-control, possession of irreverent and disreputable books such as *Jurgen*, expression of subversive opinions with regard to the relationship of capital and labour, and disbelief in God are among the offences so punished.

Not only is it necessary not to profess unpopular views—it is sometimes necessary to profess popular ones. In order to placate herd opinion it is found necessary to enforce by law the propagator

THE FUTURE OF MORALS

of deliberate falsehood. This happens especially in those cases, unfortunately only too numerous, in which the truth is less gratifying to human conceit than we could wish, so that its adoption involves the abandonment of cherished beliefs. Such, for instance, is the belief that man is a degenerate angel, which is thought to be more flattering than the truth that he is a promoted ape. Thus the State of Tennessee has recently officially repudiated the "monkey ancestry" of its citizens. A law has been passed under which it is illegal for any teacher in a university or other public school to teach anything denying the story of creation given in the Bible, or that man has descended from the lower order of animals, and men have already been imprisoned for teaching evolution. It is not, so far as I know, maintained even in America that the doctrine of evolution is untrue. It is sufficient that it incurs the disapproval of the stronger. Thus truth herself is liable to be stigmatized as immoral if she is inconsiderate enough to flout the wishes or respectable citizens.

Where individuality is to a large extent obliterated, and citizens are cut according to approved specification by the social machine, nothing is so much valued as personality. I have said that every

THRASYMACHUS

American wishes to be like every other American, and so he does—but with a difference. He wants to have a personality of his own. He wishes to have a something about him that will convey an impression of uniqueness and cause him to be talked about among his fellows. Nothing is so much discussed in America as personality. Men try to cultivate it as they try to cultivate biceps ; agencies exist in order to tell you how to be unique, and psychoanalysts flourish by the simple process of telling you that you are unique.

But this is just what the conditions upon which herd morality depends will not let you be. Depart one hair's-breadth from the standard habits of thought and accepted codes of conduct, and the herd will make your existence intolerable until you consent to toe the line

Now the drift of British development follows increasingly the course set by America. America is our most advanced nation in morals as in everything else, and, if we want to know what England will be like to-morrow, we cannot do better than look at America to-day. America is at once a signpost and a stimulus. What American business men are, that do our business men strive humbly to be. They ape their magnificence, and enjoy a large and increasing share of this power. The stockbroker's conception of the good

THE FUTURE OF MORALS

life is becoming increasingly accepted by the clerk, the clerk's by the shopkeeper, the shopkeeper's by the workman, so that the community as a whole is doing its best to live up to the standard which its business men set. So soon as we have got rid of the last vestiges of our dying aristocracy, such as respect for hunting and a semi-feudal tenantry, we shall subside into an inferior and imitative satellite of the States

The objects of American civilisation are to substitute cleanliness for beauty, mechanism for men, and hypocrisy for morals. It devotes so much energy to obtaining the means to make life possible, that it has none left to practise the art of living. Hot baths and more hot baths, larger and ever larger hotels, faster and ever faster cars, golf played by ever fatter and more vulgar men, and lap-dogs kept by ever fatter and more vulgar women, cocktails and culture, psycho-analysis and faith healing, sensual poetry and sensational sport, supported and maintained by an illiterate governing class ready to be imposed upon by any quack or charlatan who can persuade it to take an interest in what it imagines to be its soul, such is the probable development of bourgeois civilization in England.

Hints of the growing adhesion of the herd to the ideals and pursuits of big business

THRASYMACHUS

are not wanting in current developments of moral sentiment. As the profiteer supplants the aristocrat as the dominant force in the community, a slight twist is given to the moral opinions of the herd as a whole in order that they may be brought into line with the changed interests of the stronger. Moral sentiments suitable to the interests of a hereditary aristocracy of landed proprietors insensibly give place to a morality designed to protect and safeguard the pursuits of the fat man on holiday.

An example of this process is afforded by the changed attitude to hunting. A hundred years ago hunting was considered an entirely honourable pursuit, appropriate to gentlemen and advantageous to the countryside. To-day it is attacked on humanitarian grounds and voices are raised in favour of the fox. If he must be killed why not humanely? It was recently reported that a fox chased by the Cowdray hounds jumped through the window of a private residence and up the chimney flue. Efforts were made to smoke him out by lighting a fire immediately below, for all the world as if he were a boy chimney brush of a century ago instead of a fox, but they were unsuccessful. Ultimately workmen removed some bricks and the fox was got out and given to the hounds. This case

THE FUTURE OF MORALS

caused an outcry on the ground that the fox, who had given the hounds a good run, was the victim of cruel and unsporting conduct. A similar outburst was provoked by a hunted stag who recently took refuge in the Channel, and was picked up and carried to France.

That hunting is now condemned by the moral sense of the community not because of any increase in humanitarian sentiment, but because of a change in the interests of the predominant herd, is shown by the apathy of public opinion with regard to the victims of the gun and the motor. Business men unable to hunt because of the obesity produced by their habits are not debarred from shooting. Moors are hired in Scotland and all creatures liable to interfere with the supply of game are ruthlessly exterminated. Thus a squirrel-catching society has recently been formed in Aberdeenshire. Rewards are offered for each squirrel captured, and it is estimated that between two and three thousand squirrels are killed a year. At Monte Carlo business-men sit on terraces and shoot down pigeons which have been previously imprisoned in darkened boxes, with the result that, when they are let out into the sunlight, they are too dazed to fly away. Before they are placed in the boxes the tails of these birds are removed. This impedes their flight and makes things

THRASYMACHUS

easier for the business-men, who kill between sixty and a hundred an hour. But it is not thought, except by cranks, that the business-men are immoral for amusing themselves in this way, although it is illegal in England for boys to steal the eggs of many kinds of birds.

In the south of England, where the roads are tarred to facilitate the passage of motors and the approach of business-men is heralded over the countryside by a stink of tar and petrol, it is reported that the emanations from the roads have poisoned the waters of the Test and Itchen and caused the death of many of the living things that dwell in them. Even the fish, it seems, have begun to feel the march of progress.

Motors are frequently the cause of the death to hens, puppies, cats and small children. Yet nobody thinks the business man's pursuit of motoring immoral. On the contrary, it is assumed without question that the road is his property, and that the pedestrian should make way for him, while the risk to life and damage to limb consequent upon his refusal to do so are regarded as the results of culpable folly and negligence on the part not of the motorist but of himself.

Business men are given to amassing property, but not to making friends. It is not in personal relationships that they

THE FUTURE OF MORALS.

seek the good life, but in a plenitude of goods. For this reason current herd morality visits offences against property with greater severity than offences against the person. A man will get six months for stealing a diamond necklace, but only six days for beating his wife. But, though the ill treatment of a wife by her husband is punished with comparative lightness, her appropriation by another man is considered to be the height of wickedness. This is because the man who makes love to his neighbour's wife is committing an offence against property. For the same reason the desire on the part of a wife to secede from her existing possessor and to be an independent entity maintaining herself by her own exertions is regarded with dislavour.¹ It is as if a valuable house were to insist that it should remain uninhabited.

Those who belong to a herd are in general unable to understand the wish of others to escape from it. Such a wish is an implied criticism upon the herd conception, and brings a sense of insecurity. Thus the desire for leisure and solitude, or for a life amid wild surroundings is regarded with instinctive disapproval. A Frenchman recently exploring in Brazil came upon a party of Indians one of whom

¹ Cp the success of A. S. M. Hutchinson's *This Freedom*.

THRASYMACHUS

had a paler skin than the others. The pale-skinned Indian turned out to be his long-lost brother, who had lived among the Indians for a number of years. The explorer immediately set to work to persuade his brother to return with him to civilisation. His efforts, however, proved unavailing. The brother asked why he should return to a community in which he had to pay taxes, wear clothes and do other disagreeable things, when he could live with the Indians in a state of nature without labour of any kind. The explorer had no answer to these questions. He was unable to understand this refusal to return to the herd and accept the restrictions that existence in the herd involves. Accordingly he told his brother that he was a hopeless degenerate, and left him to what he characteristically called his fate.

Something of the same feeling is entertained by the average man towards the artist or the writer. He distrusts the contempt of herd standards which his irregular life implies. This sentiment is reinforced by a feeling of insecurity in regard to possessions. The average man is too busy to spare time for sexual immorality, and instinctively suspects the life of the artist or writer because of the facilities which it affords for meddling with his wife during office hours. The general

THE FUTURE OF MORALS

nature of the objection entertained by the herd to sexual immorality will be examined more fully in the next chapter.

Before I close this chapter I wish to point out how the sentiments I have endeavoured to describe have been intensified by the decay of religion

Communities in which the average man is the stronger have always been noted for their Puritanism and high moral standard. Promiscuity has historically been practised by the aristocracy rather than by the middle classes, and in societies in which the standard is set by the latter is visited accordingly with a disproportionate amount of moral obloquy. Severer steps would no doubt have been taken against it, had it not been for the conviction that the sinner would be punished hereafter. The poor man, lacking the rich man's goods, has comforted himself with the story of Lazarus. But the moral man has found equal consolation when denying himself the pleasures of the flesh, in picturing the eternal torments which awaited those who refused to be bound by his inhibitions.

The average moralist has accordingly refrained from punishing the successful libertine, knowing that God would do it for him. But this conviction is no longer held. God is a much more mysterious being than he used to be, and we have less

THRASYMACHUS

knowledge of his ways. It may be that he does not exist at all, and in any event the belief that he will do this or that, and, in particular, that he will entertain the same moral views as we do ourselves, is no longer entertained with its old-time certainty. "Vengeance is mine, saith the Lord, I will repay." Perhaps it is, but it might be visited on the wrong people. In any event it is safer to take no chances, and to make sure that sinners shall suffer in this world the punishment which the eccentricity of God's views may permit them to forego in the next. For this reason it is to be expected that the herd morality of the future will develop a severer outlook upon derelictions from the standards of behaviour which it regards as moral. What these derelictions are, and what are the reasons for supposing that in spite of this attitude they are likely to increase, I will consider in the next chapter.

CHAPTER III

THE NEW LIBERTY OF ACTION

Important forces are, however, at work in the contrary direction. If the growing prevalence of herd morality will tend to place a new emphasis on the importance of uniformity, uniformity in the moral sphere is likely to prove more difficult of attainment.

Two factors in particular will militate against it. These are the growth of economic independence among women, and the practice of birth control. Let us consider these factors separately. 1 The basis of the institution of marriage is economic. Theological factors have of course played their part. The early Christian fathers, expecting the immediate end of the world, saw no reason to take steps to ensure the continuance of the race. The Christian hostility to the pleasures of the senses was, therefore, allowed to rage unchecked, and sexual intercourse was denounced as both wicked and unnecessary. As time passed, however it was found that the world showed no signs of coming to an end, an inconsiderateness which led to the necessity for a

THRASYMACHUS

change of attitude. The Church met the situation with a complete *volte face*. It had previously stigmatised the sexual passions as so wicked that no Christian should be permitted to indulge them; it now pronounced them to be so sacred that no Christian should be permitted to indulge them without the sanction of the Church. The sanction of the Church was given in marriage, a device whereby the Fathers sought to control and to regulate the workings of a passion they were unable to ignore. Since then the Church has claimed both the ability and the right to sanctify sex, and has looked with disfavour upon marriages consummated by the State as an infringement of her monopoly.

But the fact that marriage has been instituted by God and cornered by the Church is not sufficient to account for its existence before the Christian epoch or its stability since These rest upon an economic foundation.

Throughout the recorded history of civilization the only recognised way for a woman to make her living has been through her body. Her body being her one saleable asset, she could employ it in either of two ways. She could sell the use of it to one man for an indefinite period, or she could lease it to a number of men for short and strictly regulated

THE FUTURE OF MORALS

periods. The first method is known as marriage; the second as prostitution. The existence of these two, and of only these two, ways of gaining an economic livelihood has led to the formation of two unofficial women's Trade Unions, the Trade Union of wives and the Trade Union of prostitutes. The strength of these unions is directly proportional to their monopoly of the economic field, and far exceeds that of any recognised Union in the more strictly industrial sphere.

It is immediately obvious that any woman who was prepared to give for love or for nothing what other women were only prepared to give for maintenance was a blackleg of the most subversive type, and the whole force of organised female opinion has, therefore, been devoted to making her position impossible. The force of female opinion so directed is known as morality, and the bitterness with which the free lover, that is to say, the woman who loves outside the marriage tie or the prostitute's preserves, is denounced as immoral, is due to woman's unconscious recognition of the fact that she is cutting at the basis of the economic livelihood of her sex.

It is of course true that the two women's Unions are to some extent competitive, and that the existence of the prostitute

THRASYMACHUS

threatens the security of the wife while it guarantees the chastity of the young girl. For this reason there is and always will be hostility between the Unions. The wife's first commandment is the Deity's "Thou shalt have none other woman but me", and she is accordingly accustomed to regard the prostitute with horror, whereas she does not object to the existence of other wives, since this does not, at least in theory, threaten her own. For this reason, too, the method of earning a living adopted by the wife is generally preferred to that adopted by the prostitute, and is esteemed the more honourable by public opinion. So true is this that in most women the belief in the honourableness of wifehood has become second nature, the really nice woman feeling instinctively that the only decent way for her to live is on the earnings of some man. But while this feeling provokes hostility to members of the other Union, it is a hostility which cannot compare in bitterness with the scorn and hatred felt for the free lover. The reason for this is obvious. The number of women a man can have for money is limited by the extent of his income; the number of women he can have for nothing is limited only by the extent of his ability to find them. For this reason it is felt instinctively that the free lover is a greater

THE FUTURE OF MORALS

menace to society than the prostitute. The prostitute, indeed, is and always has been recognised as a social necessity. She guarantees the chastity of nice women by providing a necessary solace for men up to the comparatively late age at which modern economic conditions allow them to marry. Thus in Tsarist Russia the brothel was a State recognized institution. The new brothel was formally opened by the police officer, and was hallowed by a religious ceremony in the course of which the premises were blessed by a Russian Orthodox priest.¹

Sexual morality in men springs from the same economic source, but is more limited in scope and less fiercely embraced. This is a natural deduction from what has just been said. If the livelihood of women is bound up with the strict observance of the marriage tie, the maintenance of the moral restrictions upon which marriage as an institution depends is their special concern. In a purely promiscuous community the livelihood of women would be intolerably insecure. Hence women are the natural guardians of morality, knowing that it guarantees their bread and butter. It is not too much to say that morality as a going concern is kept up by women. Men on the whole, despite their strong

¹ *Report of Labour Delegation, 1925.*

THRASYMACHUS

property sense, are not interested in moral questions. They have not the woman's delight in nosing out scandals and, except when they are whipped up into a state of moral horror by their women folk, are much too prone to live and let live. The attitude of deliberate uncharitableness towards erring sisters which the sex affects, does not come naturally to men, and, left to themselves, they would condone offences which their outraged spouses insist on punishing with social ostracism.

It is on the whole true to say that the moral sense, so far as sex is concerned, only begins to function in men after marriage and, except in the case of one's own daughter whose saleable value in the marriage market is thought to be diminished by in chastity, it centres upon the wife. Since the wife is in origin a piece of property purchased by the husband for his own enjoyment, to her must be extended the jealous guardianship which presides over property in general. The wife is the most valuable of a man's indoor possessions; in return for the use of her body he has agreed to maintain her in such dignity and leisure as he can afford. This obligation to maintain the wife is a permanent one persisting even after the enjoyment of her person has ceased. Thus when a wife divorces or lives apart

THE FUTURE OF MORALS

from her husband, he is usually required to maintain her, so long as she remains chaste. So soon, however, as she bestows the enjoyment of her person upon another, the obligation to maintenance ceases, presumably on the ground that the new consumer should be saddled with the obligation of keeping up what he enjoys. In nothing is the property basis of marriage more clearly discernible than in the 'dum casta' clause of the English divorce law.

It is upon the same economic basis that the husband's objection to infidelity chiefly rests. If another man is permitted to enjoy for nothing what he himself has purchased at a heavy outlay, the husband naturally feels aggrieved. He is also rendered ridiculous. It is for this reason that the cuckold is always presented in literature as a comic figure; he is in the position of a man who is unconsciously having his pocket picked. The husband's predilection for fidelity in the wife is thus as strong as the wife's demand for fidelity in the husband—at times it is even stronger—and springs from the same economic source. So long as the wife is in essence a piece of property, it is naturally felt that only the man who has paid for her should have the use of her; so long as a woman can only obtain her living by selling herself to a man,

THRASYMACHUS

she not unnaturally demands that others should not be allowed to undercut her.

We have spoken of this situation as if it existed in the present, but it is already in many respects an affair of the past. The history of the last fifty years has recorded the growing and continuous influx of women into wage-earning employment which bears no relationship to sex. Women cure the sick, plead in the law courts, teach in the schools, do manual labour in garden, field, factory and workshop, and serve increasingly as clerks, typists and shop assistants. Three were recently found among the five hundred applicants for the post of public executioner in Hungary.

Men have not unnaturally resented this change. The dependence of women has on the whole suited them, and they do not like to see those whose economic helplessness has made them a natural prey to male predatoriness rendered capable of standing on their own feet. Having deliberately deprived women of the skill, the training, the knowledge and the qualifications necessary to make their way in the world, men have then proceeded to justify themselves by proving the moral and intellectual inferiority of women from the fact that she is ignorant, unskilled and uneducated. When it is remembered that the same causes that have left

THE FUTURE OF MORALS

woman no alternative but concubinage (married or unmarried) or starvation, have compelled her, as often as not, to perform the duties of an unpaid house-keeper, it is not difficult to see how much man was the gainer by the transaction. But, unfortunately for him, he has been unable to stem the rising tide of feminism. It has long ceased to be true that a woman's only means of earning her living is by exploiting her sex attraction, and all the evidence points to the fact that the number of women in wage-earning employment will be augmented in the future. This estimate leaves out of account the probability of the endowment of motherhood, which will place all mothers, whether married or unmarried, in the category of independent wage-earners

The effect of this economic change upon the situation I have briefly sketched, and upon the moral sentiments to which it gives rise is likely to be twofold.

In the first place the unmarried woman will tend increasingly to form temporary, irregular unions. This result will follow :

(1) Because her knowledge that she can earn her living in other ways will not force her to demand from the man a pledge of life-long maintenance as the price of her love

THRASYMACHUS

(2) Because knowing that she is not dependent upon a man for her livelihood, she will no longer have the incentive to pander to the man's demand for virginity in his prospective wife by remaining chaste until marriage.

(3) Because a man's abandonment of the connection which she has formed with him, a process commonly known as desertion, will not as heretofore leave her stranded without means of support,

(4) Because men will be less chary of forming temporary, sexual relationships with women, when they know that they are not expected to keep them.

In the second place the married woman will tend to mitigate her hostility to irregular unions formed by unmarried women when she realizes :

(1) That her husband's mistress, not being dependent upon him for support, will constitute a less formidable threat to her livelihood

(2) That the possible transference of her husband's affections and consequent withdrawal of financial support will not leave her necessarily incapable of finding other employment.

(3) That, as the clear cut line of demarcation between married and unmarried unions becomes obscured by the increase in the number of the latter, it will no longer be either possible or

THE FUTURE OF MORALS

necessary to put the unmarried mistress as completely beyond the pale of decent society as has been customary in the past.

From the above considerations it will be seen that the growing economic independence of women is likely, unless counteracted by other forces, to lead to a relaxation of the marriage tie, to an increase in irregular unions, and to a growing tendency to dispense with marriage altogether.

But, some critics will object, what about the children? Hitherto I have left the children outside the scope of the argument, and it is high time to bring them in. This leads me to a consideration of the second of the two factors which I cited at the beginning of the chapter, the practice of birth control.

II. That the practice of birth-control is likely to increase there can, I think, be no reasonable doubt. I am aware that there is considerable opposition to birth control at the moment, and that various arguments are brought forward to discourage people from employing its methods. These arguments are not held on rational grounds, but are dictated by prejudices based on certain religious or political opinions which those who put them forward profess. It is said, for example, that birth-control is displeasing to the

THRASYMACHUS

Almighty, who invented sexual intercourse for the reproduction not of pleasure but of children ; and it is thought, though not said, that it is injurious to the State because it will diminish the supply of cannon fodder and cheap labour

As regards the Almighty, whether he would agree with the views put forward by those who speak in his name is not known. Until, therefore, we can obtain a direct expression of his opinion on the matter, it is more prudent to assume that his attitude is non-committal, than to supply the place of knowledge by converting our conjectures into dogmas. As regards the supply of cannon fodder, this is supposed to be important for consumption in future wars. Since, however, those who oppose birth control on the ground that it will diminish the number of recruits, also hold that wars are inevitable owing to the pressure of expanding populations, it would seem that populations which cease to expand have no need to maintain large armies to protect them from the results of expansion.

The position of those who oppose birth-control being based on political and religious feelings of an emotional character is not, however, refutable by argument, or assailable by reason. Our business is not to reply to arguments which have no rational basis, but to estimate what

THE FUTURE OF MORALS

influence they are likely to have in the future.

There is, I think, little doubt that this influence will be a diminishing one. Much of the opposition to birth-control is little more than an expression of the generalised feeling of hostility which people experience in regard to anything that is new. Whether it be a new morality, a new sonata form, a new way of wearing the hair, a new kind of corset (or none at all), or a new saviour of mankind with which he is presented, man's natural and instinctive reaction is one of antagonism. The antagonism is provoked not by any intrinsic demerit in the thing that arouses it—indeed in fifty or a hundred years' time it is embraced with acclamation as the last word in orthodoxy or good form—but simply by its newness. The suggestion that any way of life, of thought or of conduct can be better than that which they have hitherto followed wounds people's self-respect, and some time must elapse before they can overlook the offence.

This kind of objection applies in a marked degree to birth control which challenges people's most intimate habits, and seems likely to effect a revolution in their conduct. It will, however, diminish as the idea of birth-control becomes familiar. The reaction of the normal Englishman to that which is new usually

THRASYMACHUS

passes through three phases. He says first "It is absurd", second "It is contrary to Scripture", and third "Of course! I knew it all the time". It will be seen that the opposition to birth-control has already passed into the second phase

There is a further reason for the probable weakening of the antibirth-control movement. The organised opposition to birth-control comes very largely from members of the upper and middle classes. These on an average have very much smaller families than the lower classes in whose interests they profess to oppose birth-control, and to whom they denounce it. The inevitable inference from this fact cannot continue indefinitely to remain undrawn, and, as soon as it is drawn, the lower classes will be able to gauge the sincerity of those who exhort them to choose between continence or children, while being themselves remarkable for neither.

Finally the knowledge of the use of contraceptives is bound in course of time to percolate through every social stratum. The advantages of birth control to the individual are so obvious that few will refuse to avail themselves of the knowledge which the State, in the persons of the medical officers in charge of infant welfare centres, at present withholds;

THE FUTURE OF MORALS

while the disadvantages to the community of a system under which the lower strata proliferate unchecked, while the upper and middle classes barely keep up their numbers, and the exceptional man who has the talent and energy to climb from one stratum into another finds it necessary to sterilize himself in the process, will, in the shape of a rapidly deteriorating population, force themselves upon the notice of even the most pious.

Birth-control has come to stay; it has also knocked the bottom out of what is called sexual morality.

If the views put forward in the previous chapters be correct, if morality is the interest of the stronger, and if, where the stronger is the herd of average individuals, it expresses itself in disapproval of conduct from which the average, for whatever reason, shrink, then the driving force of morality is to be looked for not in any innate sanction but in the power which the herd possess of rendering intolerable the lives of those who flout its prejudices. But in order that the herd may be able to exercise this power it must be in a position to detect the objects of its censure. This has been possible in the past owing to the unfortunate propensity of sexual irregularity to result in offspring. It is not easy to disguise the existence of a child, and, even if the

THRASYMACHUS

desperate course of overlaying or otherwise extinguishing it be adopted, the disposal of the corpse presents grave difficulties. Such a course is also open to the objection of doing grave violence to the humaner parental instincts. But birth-control precludes the necessity for children, and by so doing makes it possible to "sin" without being found out.

It is not to be expected that people will refuse to avail themselves of the liberty thereby conferred. Whether we are to infer that people are by nature sinful, or simply that a sin which has been manufactured by herd morality is not really a sin is a question that does not immediately concern us. What does concern us is the impetus which this ability to avoid detection is likely to give to irregular intercourse. Birth control combined with economic independence has brought a new freedom to women. Economic independence enables them to have children without going either to the altar or into the workhouse. The practice of birth control makes it unnecessary even to have the children.

One further result of birth control may be noticed before we pass on. This is the probable abolition of the double standard of morality for men and women after marriage. That adultery in a wife has always been considered to be more serious

THE FUTURE OF MORALS

than adultery in the husband the state of the law bears witness. Adultery in a wife is a sufficient cause for divorce, in a husband it¹ must be coupled with cruelty or desertion. This disparity of treatment has always caused grave offence to feminist organisations. Yet the reason for the difference is not far to seek. It arises from the economic dependence of the wife upon the husband. As the result of this dependence any children which the wife may acquire in the course of her adventures become a charge upon the husband, who is thus required to pay for the fruits of his own shame and another's enjoyment. It is true that he is, or ought to be, similarly responsible for the upkeep of the offspring which may result from his own adultery, but in this case he has at least had his pleasure and sinned his sin, and cannot in justice complain if his substance is consumed by its fruits. Where, however, adultery on the part of the wife does not carry with it a risk of children to be maintained by the husband, it becomes an offence neither more nor less serious than adultery on the part of the husband, and the double standard ceases accordingly to operate.

As a result of the above-mentioned

¹ In July, 1923, the law was amended and adultery in the husband became a sufficient ground of divorce.

THE FUTURE OF MORALS

than adultery in the husband the state of the law bears witness. Adultery in a wife is a sufficient cause for divorce, in a husband it¹ must be coupled with cruelty or desertion. This disparity of treatment has always caused grave offence to feminist organisations. Yet the reason for the difference is not far to seek. THRASYMACHUS

considerations we may expect that the practice of birth control will profoundly modify our sexual habits. It will enable the pleasures of sex to be tasted without its penalties, and it will remove the most formidable deterrent to irregular intercourse

It is this consideration which lies at the root of the opposition to birth control. Deep down in most of us there lurks something of the old Puritanical attitude, which insists that pleasure cannot or should not be had without paying for it. This at least is true of pleasures we do not share. And it is this sentiment which is outraged by the immunity from the consequences of sexual "pleasure which birth control confers. Macaulay objected to bear baiting not so much because of the pain which it gave to the bear, as because of the pleasure which it gave to the spectators. In the same way the great mass of decent middle-class citizens object to birth control not because of the evil which it does to the race, but because of the pleasure which it gives to those who practise it. The Puritans are up in arms; the dowagers, the aunts, the old maids, the parsons, the town councillors, the clerks, the members of Vigilance Committees and Purity Leagues, all those who are themselves too old to enjoy sex, too unattractive to obtain what they would wish to enjoy, or

THE FUTURE OF MORALS

too respectable to prefer enjoyment to respectability, in a word, the makers of public opinion are outraged in their deepest feelings by the prospect of shameless, harmless and unlimited pleasure which birth control offers to the young. And if they can stop it it will be stopped.

Hence concurrently with the increased freedom which economic independence and birth-control will give to young people, and to young women in particular, there is likely to be a growth in restrictive and purely inhibitory morality on the part of the middle-aged.

We are in, then, for a wave of Puritanism on the one hand combined with the possibility of a new liberty of action on the other. What will be the outcome ?

ASPECTS OF COSMOGONY

only live through a few ticks of his clock, and fate might have ordained that they should be anywhere in the three days that the child has already lived, or in the seventy long, and possibly tedious, years yet to come. The wonderful thing is that she has selected for us what is, perhaps, in some ways the most sensational moment of all in the life of our race.

The child sets its newly awakened mind to work to adjust and co-ordinate a new array of facts. If the world was not made to surround its cradle, what purpose can it serve? If the lights of the great ships in the harbour were not designed to light its nursery at night, what can they possibly be for? And, most interesting problem of all, if the world is such a big affair, can there be other cradles and other babies?

These remarks will have served their purpose if they suggest that the cosmogony of 1928 should not be judged as a finished science or the solution of a problem; it is rather the first confused

EOS ; THE WIDER

gropings of the infant mind trying to understand the world outside its cradle. And if the impression produced by its first inexperienced glance at the outer world had to be described in a single word, it would probably select the word "immensity".

THE IMMENSITY OF SPACE

The immensity of space is measured by the figures already mentioned. Light and wireless signals travel at the same rate because, of course, they are essentially the same thing ; and this thing takes a seventh of a second to travel round the world, and probably something like 100,000 million years to travel round the universe. The ratio of these times (2×10^{19})¹ measures the dimensions of

¹ Here, as elsewhere, 2×10^{19} is an abbreviation for 2 followed by 19 zeros, or 20,000,000,000,000,000,000. A million is 10^6 , a million million is 10^{12} , and so on. The largest number which occurs in the present book is $10^{420,000,000,000}$. Failing our convenient mathematical shorthand, this number would be expressed by a 1 followed by six million volumes similar to the present, all full of 0's.

Fig 2 Regular shaped nebula (N G C 4594) with ring of dark matter surrounding equator

TWO EARLY STAGES OF NEBULAR DEVELOPMENT

ASPECTS OF COSMOGONY

the universe in terms of the familiar dimensions of the world ; incidentally, it also measures the expansion of our spatial ideas since Copernicus. The disparity of size is too great to be easily visualised. Suppose the size of our earth represented by a single atom, whose diameter is about a hundred-millionth part of an inch. Then the range of vision of the biggest telescope is about represented by the whole earth, and the size of the whole universe, according to the theory of relativity, is represented by a stack of a thousand million earths.

Scarcely less bewildering than the immense extent of space is the immense amount and variety of matter it contains. The sun, which is a million times as big as the earth and 300,000 times as massive, proves to be something less than a grain of sand on the seashore. It forms one of a family whose number must certainly be counted in thousands of millions ; Dr. Seares has estimated it at thirty thousand millions. This is not

EOS ; THE WIDER

the only family of stars in space. Each of the great spiral and other extragalactic nebulae, such as are shown in the Frontispiece and in Plates II and III is either a family of stars, or consists of stars in the making, or of matter which is in all probability destined ultimately to form stars.

We can estimate the masses of these great nebulae by gravitational means, and each is found to contain enough matter to make a thousand million suns. This of itself will give some conception of the vast size of these nebulae, but to tell the whole story, it must be added that their colossal masses are so tenuous that each millionth part of an ounce is, on the average, as big as the Matterhorn. Think of a body which is bigger than the Matterhorn by as much as a thousand million suns is heavier than a millionth part of an ounce, and we have the size of any one of these great nebulae. Any one of the photographs reproduced in this book would have to

[Mt. Wilson Observatory]

Fig 3 Spiral nebula (N G C 891) seen edge-on

A LATER STAGE OF NEBULAR DEVELOPMENT

ASPECTS OF COSMOGONY

be enlarged so as to cover at least the whole of Asia before a body of the size of the earth became visible in it at all, even under the most powerful of microscopes.

Dr. Hubble estimates that about two million such nebulæ are visible in the great 100-inch telescope at Mount Wilson, and that the whole universe is about a thousand million times as big as the part of space which is visible in this telescope. Let us now multiply 1000 million by 2 million, and the product by 1000 million. The answer (2×10^{24}) gives some indication of the probable number of stars in the universe; the same number of grains of sand spread over England would make a layer hundreds of yards in depth. Let us reflect that our earth is one millionth part of one such grain of sand, and our mundane affairs, our troubles and our achievements, begin to appear in their correct proportion to the universe as a whole.

EOS ; THE WIDER

THE VARIETY OF THE STARS

While the stars may be compared to grains of sand in number, they differ too much *inter se* for the comparison to be carried further. They used to be regarded as mere points of light which differed from one another in glory but were too remote for any investigation as to their nature and condition to be practicable. Astronomy can now take their temperatures, by methods similar to those used with factory furnaces, can measure their sizes with a specially-designed stellar interferometer, and can calculate their weights from the gravitational pull they exert on companion stars, just as we calculate the weight of the earth from the pull it exerts on the moon to keep it in its orbit. And the measurements disclose an immense variety of big and little stars, of bright and faint stars, and of hot, hotter and still hotter stars.

The faintest star known, Wolf 359,

ASPECTS OF COSMOGONY

emits only a fifty-thousandth part of the light of the sun. If this star were suddenly substituted for the sun, the seas would immediately freeze into solid ice, and the atmosphere condense into liquid air ; people at the Equator would receive rather less light and heat from their new sun than one receives from a coal fire a mile away, and we should meet an icy death. At the other extreme, the most luminous of known stars, S Doradus, emits 300,000 times as much light and heat as the sun. If this star were to replace our sun, our temperatures would run up to about 7,000 degrees Centigrade, which is about twice the temperature of the hottest part of the electric arc, and the solid earth, with its cloud capped towers and gorgeous palaces and ourselves, would immediately dissolve into vapour.

There is almost as much variety in the sizes of the stars. The smallest known star, Van Maanen's star, is about the size of the earth ; a million such stars

EOS ; THE WIDER

could be packed inside the sun and leave room to spare. The largest known star, Betelgeux, is so large that 25 million suns could be packed inside it. If we represent the sun by a golf-ball, Van Maanen's star becomes something smaller than the dot of an 'i' on this page, while Betelgeux must be represented by a good-sized house. If Van Maanen's star were to replace our sun, it would appear smaller than Jupiter or Saturn ; if Betelgeux were to replace our sun, we should find ourselves inside it, its radius being greater than that of the earth's orbit.

As compared with their enormous ranges of brightness and size, ranges greater than those between a searchlight and a glow-worm, or between balloons and bird-shot, the stars shew a restful uniformity in their weights. No star exists whose weight is known or suspected to be less than about a tenth of that of the sun, while few exist which have as much as ten times the sun's weight—probably

ASPECTS OF COSMOGONY

about one in a hundred thousand, the other 99,999 all having weights between a tenth and ten times the weight of the sun.

It follows that the different sizes of the stars do not result to any great extent from the different amounts of matter the stars contain ; they result rather from the varying closeness or looseness with which the matter is packed. An average ton of matter in the sun occupies about as much space as an ordinary ton of coal in a coal-cellar, but the same amount of matter in Betelgeux takes up as much room as the Albert Hall, while the average ton of matter in Van Maanen's star takes up only as much room as a pea in a pea-pod ; a hundred tons of it could be packed into a pocket book with ease. Judged by the standards of solidity which prevail on Van Maanen's star, everything on earth is of the very filmiest of gossamer.

EOS ; THE WIDER

The Structure of the Stars

Their enormous differences of brightness, size and density notwithstanding, the stars are believed to be essentially similar structures.

A normal atom consists of a central nucleus around which a number of electrons revolve in orbital motion like planets round the sun—a miniature solar system, in fact, in which the vacant space far exceeds that occupied by matter. The nucleus, although excessively minute, its diameter being only a small fraction of a millionth of the millionth of an inch, is by no means a simple structure. It consists of a number of particles charged with positive electricity, called protons, and a number of other particles charged with negative electricity, which carry the same charge as, and may be identical with, the electrons which revolve outside the nucleus.

Under the action of great heat the outermost of the atomic electrons begin

ASPECTS OF COSMOGONY

to break loose from the atom and fly off at a tangent, just as, when water is heated up, the outer molecules break loose and set off on independent journeys of their own. Finally the water is wholly evaporated; the heat has transformed it into a mass of gas (steam) in which each separate molecule flies along its own individual path, like the bullets on a battlefield. In precisely the same way, the application of heat to the atoms causes successive layers of electrons to break loose from their moorings, and the atoms become smaller and smaller until finally no coherent structure remains but merely a powdered *débris* of atomic constituents, each nucleus and electron going its own way regardless of the rest.

We cannot study the process to any extent in the laboratory since we cannot command high enough temperatures. It is just beginning in hot flames and in the electric arc. The atmospheres of stars are at higher temperatures than any obtainable on earth, and here the process

EOS ; THE WIDER

is further advanced ; the spectroscope shews that the atoms may be broken into two, three or even four pieces. The temperatures in the interiors of the stars are higher still, and although we cannot measure them directly we can calculate them with very fair precision. The temperature at the centre of the sun is found to be in the neighbourhood of 50,000,000 degrees, and this is a fairly average temperature for the stars in general. It is difficult to form any conception of the physical meaning of a temperature which is so far removed from anything in our experience. If a piece of matter the size of a pea could be maintained at this temperature it would scorch and shrivel up anyone who ventured within a thousand miles of it ; its directed beam would destroy an army in an instant. Nevertheless, the mathematician need not hesitate to thrust his calculations right into the very hearts of the stars, and he can shew, with something approaching very near to certainty, that at the centres

ASPECTS OF COSMOGONY

of most of the stars nearly all, or perhaps quite all, of the electrons must have broken loose from their parent atoms, leaving the stellar matter almost or quite pulverized into its constituent nuclei and electrons.

When I first put forward this view in 1917, I thought it was entirely novel, but I have since found that in 1644 Descartes had conjectured that the sun and fixed stars were made of matter "which possesses such violence of agitation that, impinging upon other bodies, it gets divided into indefinitely minute particles". My own suggestion was not conjecture, but was an inevitable deduction from modern knowledge of atomic physics. Since it was put forward, a great deal of labour has been devoted to testing the hypothesis that practically all the electrons have broken loose from their atoms, the stripped atoms and electrons flying about in a general hurly-burly like the molecules of a gas. But the hypothesis has proved disappointing, and a much more

EOS ; THE WIDER

probable hypothesis is, I think, that the atoms are not stripped quite bare, but that in most stars they retain a few rings of electrons which give the atoms so much size that they jostle one another about like the molecules of a liquid. This hypothesis explains beautifully the otherwise puzzling fact that the stars tend to fall into distinct groups, of what may almost be described as 'standardised' sizes. On the 'liquid star' hypothesis, these different sizes correspond to the different sizes possible for the stellar atoms, which may have 0, 1, 2, or 3 rings of electrons left, but cannot have fractional numbers. The largest stars of all, such as Betelgeux, have three rings left, while minute stars, such as Van Maanen's star, consist of atoms most of which are stripped quite bare, so that there is almost no limit to the closeness with which they can be packed together. These stars of course represent extremes of size ; more normal stars such as Sirius, Procyon and the Sun consist mainly

ASPECTS OF COSMOGONY

of atoms in which one ring of electrons is left revolving about the nucleus.

Thus the observed sizes of the stars proclaim the secret of the structure of the atom. The sizes of the stars are discontinuous because the sizes of atoms broken down to different stages are discontinuous. These discontinuities can be traced in turn to the discontinuities which form the central feature of the new system of quantum dynamics, which is now known to dominate the whole of atomic physics. Thus the distinguishing characteristic of the laws which govern the most minute processes in Nature is transmitted directly into the large scale phenomena of astronomy and governs the distribution of the huge masses of the stars. The infinitely great is never very far from the infinitely small in science, but it would be hard to find a more sensational illustration of the unity of science than that just given.

On this hypothesis, not only do the observed sizes of the stars disclose the

EOS ; THE WIDER

general structure of the atom, which is old knowledge, but they also reveal the detailed structure of the particular atoms of which the stars are composed, and this is new knowledge. The more complex the structure of an atom is, the higher the temperature needed to break it up. We find that simple atoms would be completely broken up in the interiors of the stars ; no coherent atomic structure would remain. To retain the various sizes demanded by the theory of liquid stars, the stellar atoms must be heavier and more complex than any atoms known on earth. The atoms which reveal their presence in the spectra of the stars are, of course, atoms of the ordinary terrestrial elements—hydrogen, iron, calcium, and the like. These, being the lightest atoms in the star, must naturally float up to its surface and so determine its spectrum. Moreover, as the earth was originally formed out of the surface of the sun, the earth is necessarily composed of the same light elements. But it now

CHAPTER IV

THE COMING CLASH

Before I endeavour to answer the question with which I concluded the last chapter, there are one or two additional considerations to which it is necessary to refer, since they must affect our estimate of the future.

I have spoken of the possibility of a new freedom for women, due to birth control and economic independence. Other factors are likely to make such freedom more imperative on social grounds and less intimidating on moral ones.

The first is the great and growing preponderance of women in the community. It is estimated that in Great Britain there are already two million more women than men, and the figures can no doubt be paralleled from other Western European countries. Our present moral code condemns these two million, and as many more as the number of bachelors involves, to perpetual celibacy and sterility. In other words one woman out of every ten is expected to deny herself the right to motherhood or to become an outcast from decent society.

THRASYMACHUS

This system is intolerable ; it is manifestly breaking down in many directions, and it only continues at all because public opinion among women is still too unorganised to protest against it. It is already the subject of wholesale disregard and infringement in practice, and it will be abolished in theory, as soon as the social sense of the community has progressed to the point of removing the stigma from illegitimacy and the reproach from unmarried motherhood. In other words the system is bound up with the man-made convention which insists that the right to have a child shall be saddled with the duty of looking after a man, and, since there are not enough men to go round, women will sooner or later be forced in self-defence to permit themselves to have children without husbands.

So far as the right to sexual experience, independently of the right to motherhood is concerned, this is already safeguarded by birth control. The growing surplus of women will tend, therefore, through the sheer pressure of virginity, to promote an increase in irregular relationships, and to reinforce the movement towards freedom already described.

Nor will religious considerations deter with their traditional force. I have already spoken of the decline of religious sentiment in connection with the growth

THE FUTURE OF MORALS

of moral rigour in the herd. Lacking the conviction that God will punish wrong-doers, they arrogate the right to themselves. But the same scepticism which lights the fires of the heresy hunters encourages the wickedness of the heretics. If marriages were not made by God, and torment in hell is probably not the result of adultery, there is no longer reason to think that five minutes' bliss must be paid for in terms of eternal damnation. It is, no doubt, true, that God still loves the pure, but when earthly lovers are available, the price of God's love may be not worth the paying. Hence the religious argument, though doubtless it will operate as a brake in a diminishing number of cases, will no longer act as a wholesale deterrent.

A more serious consideration is put forward in the name of biology. "You are," the biologist will point out, "conducting your argument on the basis of certain assumptions with regard to the nature of women, since you predict an increase in sexual irregularity not only among men, but also, and inevitably, among women. Men, it is agreed, are regrettably promiscuous, in the sense that, even if they are monogamous in fact, they are varietist by inclination. But women are different. Their nature is not varietist but monogamous, and it will

THRASYMACHUS

in spite of all changes of material circumstances and moral sentiments, remain so. For this reason irregular sexual unions will not increase in the manner you predict."

Biological arguments of this type, derived from the alleged nature of women, are in my view mere man-made superstitions. The particular argument in question was invented by the peccant male who wished to convince himself that, however flagrant his own infidelities, his wife would remain faithful because it was her nature. The superstition was also useful, because it implied that, although a life of unvarying fidelity might do violence to his natural proclivities, he need suffer no qualm of conscience in expecting and exacting conduct which he repudiated for himself from his monogamous wife. The notion too was flattering and appealed readily to male conceit.

Now as to the existence of the facts asserted by my imaginary biologist, there is, I imagine, little doubt. There are, of course, countless exceptions either way, but the general tendency is not obscure. While the cases of My Lord and the barmaid are legion, those of My Lady and the groom are notoriously few. But admitting the fact, are we to regard it as necessarily unalterable? Many, I know, are inclined to do so. Contemplating the

THE FUTURE OF MORALS

domestic tragedies springing from the nomadic tendencies of the male, they have seen in them one more piece of evidence for the satirical plan on which they believe the Universe to have been constructed. If indeed there be design in the scheme of things, to what sort of design do the facts point? To have made man polygamous and woman monogamous they regard as God's worst practical joke, and conclude that whatever may have been the objects and disposition of the creator of the Universe, they were certainly not those of a gentleman.

But is the fact really unalterable? May it not be the outcome of centuries of servitude and seclusion, made absolute by the knowledge that fidelity meant bread and butter and a home, infidelity starvation or the streets? Since the beginnings of recorded history the great bulk of women have, it is true, remained monogamous, but they may have done so from fear of losing their jobs as wives if they did not. Those who have been rich enough to stand upon their own financial feet, or powerful enough to snap their fingers at public opinion, have not been remarkable for strict observance of the marriage tie. The cases of Messalina, Catherine the Great and the modern film star, not to mention a score of less notorious instances are instructive. Significant too

THRASYMACHUS

is the frequency of divorce among those who are sufficiently well to do to afford the enormous fees exacted by the legal profession from those who wish to change their partners. It is difficult, in the face of evidence of this kind, to avoid the conclusion that the monogamous tendencies of women are the product of training, circumstance and environment, and will not outlast the economic disabilities which produced them.

In any event the present existence of these tendencies, if tendencies they be, affords no indication of what they may become in the future. The fact that the primitive savage could only count on the fingers of one hand does not invalidate the existence of the multiplication table, any more than the fact that most women want only one man each now proves that they will not want more in a hundred years. The use of the word 'natural' begs the question. We acquire those characteristics which our circumstances and environment demand, and then transmit them to our children in whom, being inherited, they are termed natural. But this does not mean that our children will not in due course develop new characteristics of their own, if a change of circumstances renders the old ones undesirable. There are signs indeed that the new characteristics are already begin-

THE FUTURE OF MORALS

ning to appear. The attitude of representative up-to-date women on this subject is curious. They tend to deny the difference between males and females which my imaginary biologist alleged, and to declare that their inclinations are naturally as promiscuous as those of their husbands. The circumstance that they control them better argues, they assert, more sense, it does not imply a difference in nature.

Remarks of this kind are often made by women who, nevertheless, live exemplary lives and would scorn to revenge themselves upon an unfaithful husband by imitating his conduct. Nevertheless there is no reason to suppose that they deliberately misrepresent their feelings, and we can only conclude that, as usually happens, a new tendency is manifesting itself in feeling some time before it is translated into action.

For these reasons I do not think that any convincing arguments as to the future can be based on the alleged monogamousness of women in the present. Nor, so soon as the force of the monogamous habit wanes, do I think that women will consent to put up with the manifest disadvantages of a system which is based upon the assumption that it is as strong as it ever was. It is certain that they will not be deterred by the protests of outraged

THRASYMACHUS

males Conventional morality, as I have already pointed out, like many of our other institutions such as *matinées*, concerts and God, is kept going by women, and directly women withdraw their support, not all the opposition of men will avail to save it.

What then is likely to happen ?

Certainly not a relapse into complete promiscuity. The belief that people are fundamentally licentious, and that a partial removal of the barriers with which society has hedged about the business of reproduction, will precipitate the population into a welter of unbridled license, pleasantly shocking though it is to the minds of respectable people, has absolutely no foundation in fact.

This belief springs from the doctrine of original sin which has always been popular among quiet and well-behaved persons. If man is by nature wicked and sinful, and woman is very little better, then, indeed, contraception and the economic independence of women will lead to an orgy of sex indulgence in which the population will shuffle itself like a pack of cards.

Nothing of the kind is likely to happen.

The purely sexual elements in love have come to occupy an entirely disproportionate amount of attention owing to the taboos with which they have been

THE FUTURE OF MORALS

invested. Once these taboos are removed, they will revert to their natural position of comparative unimportance. If it were permissible to reproduce the sexual act upon the stage we should all lose our interest in chorus girls' legs. Moreover, playwrights would not trouble to avail themselves of the permission.

Within reason, continence and constancy are natural to human beings. It is only the intolerable strain to which our absurd social arrangements have subjected them that has caused us to regard ourselves as being by nature unfaithful and incontinent. There is no ground for the belief that the average man or woman who allow themselves to be guided by their own impulses must needs be scoundrels. For among their impulses must be numbered self-respect, moderation and a sense of what is right and fitting. Because this sense may be, and often is, at variance with the herd morality which is crystallised in the law, it does not mean that it does not exist. On the contrary, it may be in advance of the morality it disowns, so that people, thrown helpless on their passions may find that honesty, that self-respect, that hatred of cowardice and deceit, and the desire for cleanliness, health and efficiency were master passions disciplining them far more effectively

THRASYMACHUS

than the artificial inhibitions of a mediaeval morality based on an obsolete religion and deriving its power from lethargy and fear.

Some changes in social arrangements there will no doubt be. In Russia, for example, where the knowledge of birth-control is accessible to all classes, where any two parties by agreement, or either of the two parties by request may obtain a divorce, and where no stigma is placed upon illegitimacy, there has been a considerable relaxation of the family system.¹ If this means, as it probably does, that unhappy families have broken up and that husbands and wives who disliked each other have availed themselves of the opportunity to make a fresh start, we need not regret the change. Nobody would contend that society is the gainer by condemning the unhappily married to a lifetime of domestic misery, and it is difficult to see why the common sense of the community which considers the wishes of the parties concerned a sufficient ground for consummating their marriage, does not regard the wishes of the same parties as a sufficient reason for terminating it.

On the other hand it is unlikely that

¹ *Report of Labour Delegation 1925*. It is interesting to note that this relaxation has taken place concurrently with a marked decrease in prostitution.

THE FUTURE OF MORALS

those who are happily married will rush to the Registrar with the object of making themselves miserable by separating, simply because reasonable divorce laws give them the opportunity to do so. It would be an interesting experiment, and one which would enable us to estimate the extent of marital unhappiness, to proclaim a day of conjugal amnesty at recurring intervals. We might, for example, celebrate the coronation of every new king by giving to all married couples the right to dissolve their marriages, and seek other mates. If advantage were not taken of the facilities offered within twenty-four hours, there would be a compulsory reversion to the *status quo ante*. Or it might be better to fix definite periods between the days of amnesty, so that they would recur at regular intervals. Each general election might serve as a signal for a conjugal, general post, so that couples would have the chance of gaining their freedom every five years. I myself would advocate the institution of such amnesties, although I believe that the amount of conjugal dislocation they would cause would be surprisingly small. It is difficult to avoid feeling sentimental at the prospect of parting even from those whom we dislike, and the fact that couples were no longer bound in law would only tighten the bonds of

THRASYMACHUS

sentiment. A would feel that, unpleasant as B had been, he could not very well let her down, and B would shrink from leaving A with no one to look after him, even when she had herself looked after him very badly. You cannot, in short, live with any one for a number of years without dreading the prospect of their loss. The knowledge, moreover, that quinquennial escape was possible might lead to married people treating their partners with at least the degree of civility they at present reserve for their acquaintances. I do not think, therefore, that the changes caused by a conjugal amnesty would be very extensive.

For the above reasons I conclude that the social results of the changes I have been describing will amount to little more than a diminution in the number of unhappy marriages, and an increase in the number of experimental unions.

But it is not to be supposed that the herd will see the matter in this light. Nothing exceeds the license taken by the imaginations of very rigid people, and there is little doubt that the vast mass of respectable citizens, appalled and horrified by what they will insist on regarding as the prospect of growing and unlimited license, will rise to meet the situation with panic and persecution. And since, for the reasons already given,

THE FUTURE OF MORALS

morality in a modern community is that kind of conduct which suits the stronger we may expect a revival of Puritanism expressing itself in a new robustness and acerbity in the moral sense of the herd

Symptoms of this revival are not wanting in this country. If, however, we wish to see the clearest portents of what is coming we must, as I have hinted above, look to America. America, as I have already pointed out, leads the world in morals as in everything else. That American citizens set great store by morality is notorious. With their constant Purity Crusades, Puritan pogroms, Vigilance Committees, and popular juries of selected citizens, who visit surreptitiously and report upon the moral tone of New York plays, they put our more decadent civilisation to shame. On what sort of lines do these engines of American morality take action? One instance must suffice. In April of this year, one Miss Jewell Barker went bicycling in white knickers. Her outraged neighbours showed their sense of this vicious act by proceeding to seize and flog Miss Barker's father. This is at once to usurp and to invert the divine privilege of visiting the sins of the fathers upon the children.

America is, of course, pre-eminently the Land of Liberty, and we cannot hope to

THRASYMACHUS

emulate her highest feats. Efforts are, however, not wanting of our endeavours to live up to the standard our cousins set.

I will quote at random one or two American examples with their British parallels.

America. There is sumptuary legislation designed to check the license of the stage. "There is", we are told, "a rule in some American towns that the chorus girls must wear stockings, although the principals are allowed to appear with bare legs".

England. In recent months there has been a strong provincial movement against the indecency and unpleasantness of the plays produced in London. Respectable citizens complain that they never can tell what salacious beastliness may not be sprung upon their protesting eyes and ears, what searchlight cast upon the Augæan stables of high society. Actors and actresses have expressed their views, pointing out that a pure stage is as good a paying proposition as a nasty one, and invoking the case of the Gilbert and Sullivan operas to bear witness to the truth of their contention. These operas, a notorious commercial success, have never been known to bring a blush to the most bourgeois cheek. A number of London women have accordingly banded themselves together vowing to purify the

THE FUTURE OF MORALS

stage. Protests are to be made nightly in theatres at which plays to which objection is taken are performed "We shall stick at nothing," said the leader of the campaign, "to make our protest effective".

Concurrently with this development there has arisen a demand for a stricter censorship. I think it probable that we are on the threshold of a period resembling the early seventeenth or middle nineteenth centuries, when life as it is will be driven off the stage by the Puritans' demand for life as it ought to be, love will give place to sentiment, and reality to romance.

America. A new teetotal version of the bible is promised from America. The festive passages are all dry, the words 'raisin cake' taking the place of the word 'wine' wherever the latter occurs in the Authorised Version. Thus we have "And he dealt to everyone of Israel, both men and women, to everyone a roll of bread, a portion of meat and a cake of raisin".

Scotland. Steps were taken in the spring of this year to transfer to Scotland a film depicting the explorations of Livingstone. An extract from the daily paper tells us that "Prohibitionists there are already strenuously objecting to the incident which shows Livingstone, after he has been found by Stanley, drinking champagne with his rescuer! The difficulty

THRASYMACHUS

is that the incident is historically correct . . . and the problem is whether truth should be suppressed in the interests of morality. 'At any rate' said the Secretary of the London Missionary Society 'the raising of the question is *evidence of the progress made since his time*' " It can scarcely be doubted that if the meeting had taken place to-day, Livingstone would have acknowledged the march of progress by drinking water.

A straw shows the direction of the wind, and I should not be at all suprised to see Scotland go dry in the next fifty years, especially if she is successful in obtaining Home Rule. If Scotland goes dry, it is not to be expected that England will fail ultimately to follow suit. The increase in efficiency among dry workmen is very great, and if the business men remain "the stronger" in the community, they cannot continue indefinitely to be blind to its advantages, especially as they themselves would be immune from the hardships it entails. If we ask whether an officially dry but unofficially wet business class, and a working class which is dry both officially and unofficially, does not mean one law for the rich and another for the poor, our answer is that conventional morals always does mean this.¹

¹ Cp. the case of the legs of the chorus and the principals, p 74

THE FUTURE OF MORALS

The practice of virtue, we are often told, is dependent upon the possession of a sufficient income. It is only the well to do who can afford to be generous, honest and unselfish, because they have no temptation to be otherwise. But what is true of virtue is equally true of vice, and the experience of the working of prohibition in America shows how easy it is for the rich to procure illicit indulgences which are out of the reach of the poor.

There is likely to be legislation against wantonness in dress. By wantonness is meant the practice among females of unnecessarily exposing parts of their body. The curious belief that the body is in some way disgraceful, and that the exhibition of it is, therefore, wicked is very prevalent among Western peoples. It arises partly from natural prudery, partly from the property view of marriage, and partly from the inclemency of the climate which makes bathing a comparative rarity. The Japanese who have a bath twice a day, observe no discrimination between the sexes in their bathing. "One day", said the Marquis of X who had just returned from Japan, "my wife went to have a bath, and she got as far as the rinsing stage when two young Japanese came in. She had to take refuge in the tank, screaming at the top

THRASYMACHUS

of her voice until the two young men were taken away. They no doubt thought her a very fastidious young woman”.

The conviction that the body is wicked and ought to be concealed is important, because it leads women to expose portions of it which they would otherwise protect, and rightly protect, from the rigours of the atmosphere, in the belief that they are making themselves attractive. Thus women swathed in layers of furs in respect of the rest of their persons, will venture forth on the coldest day with bare bosoms and open work stockings. It is with the same object that, though their religion bids them mortify the flesh and refrain from making of themselves a stumbling block to others, they will appear at dinner with necks, bosoms, backs and arms completely naked, a proceeding not only acquiesced in but encouraged by their males. This sort of thing is anathema to the herd, who cannot afford the evening dress and the furs, and to the old, the condition of whose bodies does not, except in the case of the incurably optimistic, permit them to take the same liberties as their daughters. Hence we may expect a considerable stiffening of public opinion in the matter of decorum in dress and a return to the days in which everything except the hands and the face was carefully covered up.

THE FUTURE OF MORALS

In the sphere of what is called sexual morality we may expect a growing tendency to make wickedness (that is to say conduct which is not in the interests of the stronger) punishable by law. Attempts will be made, and successfully made, to multiply crimes by Act of Parliament.

A good example of this tendency will be found in the Bill entitled *The Children, Young Persons, etc., Bill*, introduced by a Labour Member during the tenure of office by the Labour Government in 1924. It represents bourgeois or herd morality "in excelsis." It is known as the *Offences against the Person Bill*, and its object is to codify and extend the existing enactments against abortion, cruelty to children, offences against children and neglect of children. Many of its provisions are admirable and afford what is no doubt a necessary protection to children against suffering and neglect. Nevertheless it menaces individual liberty in two ways. In the first place it increases the number of offences punishable by law, often in an arbitrary manner. For example, it is made a crime punishable by two years hard labour for a girl of sixteen to have intercourse with a young man of eighteen, the criminal being not, as one might have expected, the elder of the two parties

THRASYMACHUS

concerned, but the girl. She alone is liable to imprisonment ; the young man is allowed to go free. It is also a criminal offence to conceal the birth of a dead child, to cause or encourage a child to beg or to celebrate the marriage of a boy and a girl under sixteen, such marriages being declared invalid.

In the second place the Bill authorises grave interference with personal privacy. The officers and inspectors charged with executing its multifarious provisions are given unlimited powers of search, and authorised in certain cases to arrest without warrant. Even if a bill of this kind were to be administered by angels or sages, the opportunities for espionage and surveillance which it bestows would be sufficiently offensive. Since, however, its provisions will in fact be enforced by inspectors and constables drawn from the lower middle classes, who will be only too willing to denounce as flagrant immorality whatever transcends the experience of Clapham, the measure stands revealed as an attempt to endow the herd with increased powers of interference and control over the private lives of those who venture to stand outside it.

Encouragement would also be given to malevolent and offensive persons who wished to do harm to their neighbours by laying information against them. In

THE FUTURE OF MORALS

general, liberty would be diminished, offences multiplied, and the individual rendered more subservient to public opinion than is the case to-day.

Another expression of herd feeling will be a growing tendency to enquire into the private lives of those who hold public appointments. The herd, that is to say, will increasingly demand of those who fill positions of eminence and authority in the land that they shall conform in practice, and profess to conform in belief, to the code of prejudices and preferences which it pretentiously calls its morals. Even to-day, at the end of half a century of individualist thinking, fitness to perform a particular job is one of the least important qualifications in a candidate. What is important is that he shall be a member of a recognised religious sect, such as the Church of England or one of the sub-sects of Nonconformity, that he shall live with one wife, avoid divorcing and being divorced, and display studiously temperate habits. He must also exercise discretion in his public utterances, be judiciously but not violently patriotic in his sentiments, eschew extreme views in politics, refrain from supporting unpopular causes, and on all occasions give the herd the answers it expects. Thus in Wales it is difficult if not impossible for a man to hold any public

THRASYMACHUS

appointment unless he is a member of a particular chapel, and at English Universities many teaching posts are reserved for those in Holy Orders. Given the capacity for reflecting the opinions and flattering the prejudices of the many, men of acknowledged incompetence may successfully aspire to the most responsible posts. There is indeed no post in the country a man cannot hold with credit, if he can only succeed in holding his tongue.

Conformity rather than intelligence is more particularly required of those who seek to instruct the young. A man's ability to demonstrate the differential calculus or impart the facts of history would not, it is true, appear to be lessened by his having passed through the divorce court. Yet there is no doubt that such an event will cast a blight upon his career as a teacher. People are too satisfied with their own ways of thought and habits of conduct to wish for their children anything better than that they should think and act as they do themselves. What is demanded of the teacher, therefore, is that he should transmit to the children the same beliefs as those which are held by their parents. He must hold up to their admiration those things which their parents consider to be admirable, such as God, vaccination,

THE FUTURE OF MORALS

monogamy, the treaty of Versailles and the capitalist system, and speak with scorn and contempt of Bolshevism, atheism, Germany, free love and agitators, whom parents consider to be evil. When the teacher does this he is what is called a safe man. He inspires confidence and obtains preferment. Provided, in short, that he guarantees not to teach anything new, his capacity to teach anything at all is not seriously questioned. And, since the best minds of every generation, being in advance of their time, would prefer not to teach at all rather than to perpetuate the dogmas in which they have ceased to believe, the successful teacher is not always remarkable for intelligence.

In any event, whether intelligent or not, he must conform, and will have to do so increasingly. The herd morality which drove a statesman of the calibre of Dilke out of public life because it disapproved of his private life, is, after a temporary relapse, increasing in strength, and in the immediate future nobody who does not profess the morality to which the middle classes adhere, will stand any chance of public office. If a man's actions belie his professions he must be careful to conceal them.

One of the results of this development will be an increase in hypocrisy. To-day the agnostic don at Oxford worships regularly in the College Chapel,

THRASYMACHUS

and men will be driven increasingly to give lip service to ideals and shibboleths which in their hearts they despise. In general the gulf which separates public profession and private practice, a gulf which has made England a byword for hypocrisy, will grow wider. Driven to profess the beliefs of shopkeepers, men will rely increasingly upon their private judgment as a sanction for their conduct. Hence, the attempt to impose a uniform standard based upon an obsolete morality upon our public men, may lead to a revival of that unfashionable organ the private conscience, and those from whom an unwilling conformity is exacted in public, will insist that they and they alone are the judges of what is right and wrong in private.

I have taken the *Offences against the Person Bill* as a typical instance of the kind of legislation in which the new Puritanism may express itself. It indicates a return to the Greek conception that men can be made good by Act of Parliament. In the late nineteenth and early twentieth centuries this conception was regarded with disfavour. As the result of the individualist thinking of the preceding fifty years, the idea that there was one good life which all men ought to lead had been abandoned. The individualist view was that there were different kinds of good lives for different men, as many in

THE FUTURE OF MORALS

fact as there were men to live them, and that it was, therefore, impracticable to establish by law a positive standard of ethical conduct to which all must conform. In so far as law had any function in the matter, it was, by prohibiting violence and the cruder forms of robbery, to guarantee to the community a certain background of order without which no good life was possible. Since the mere process of obeying the law did not make a man a good man but only restrained him from certain unappetising kinds of vice by which no decent upper or middle class citizen was attracted, it followed that the function of the law was negative merely ; its object was to prevent citizens from so conducting themselves that nobody could be virtuous, not to define virtue or to tell men how to attain it. The definition of virtue was a matter for the individual's insight, and the attainment of virtue a matter for the individual's conscience ; provided, therefore, that a man abstained from the grosser forms of anti-social conduct which were prohibited by law, the question of what he ought to do and what refrain from doing, was one which he alone could decide.

I believe that this nineteenth and early twentieth century libertarianism in matters of thought and conduct is decreasing and will continue to decrease. The cult

THRASYMACHUS

of uniformity is hostile to the liberty of the individual, and in order to secure the performance of conduct of which the herd approves, the legislature is likely to assume a more positive control over men's lives than has been customary in the past. We shall, in other words, revert to the conception of one good life for all men, or rather for all poor men, a good life which it is conceived to be the business of the State and of public opinion to promote.

Summing up, therefore, we may predict the immediate future somewhat as follows : Coming into contact with the increased facilities for freedom of action to which reference has been made, the new itch to regulate men's lives will lead to persecution and heresy hunting. Men will be hounded out of public life because of their private morals, and acceptance of certain habits of belief and codes of conduct will be made indispensable to the holding of public appointments. Instead of choosing for a post the man who is best qualified to do the job, we shall choose the man who most nearly reflects the habits of thought and conduct of the selection board, that is to say, of the herd who elected the selection board to represent them. The growth of Puritanism will bring a growth in hypocrisy, a fruitful and invaluable offshoot of Puritanism. There will be an even greater disparity

THE FUTURE OF MORALS

between men's practices and their professions than there is at present, and their professions will tend increasingly to condemn their practices. The world, in short will become a paradise for the average man and a hell for the exceptional one

So much we may expect during the next fifty years. If, however, I am asked which of the two opposing tendencies I have attempted to describe in this book will ultimately prevail, my answer is that it will not be the bourgeois Puritanism whose apparent victory I foresee in the immediate future. Nor, indeed, do I think that that victory will be more than apparent.

The history of morals, like that of politics, follows the swing of the pendulum, and some reaction on the part of each generation from the habits of its fathers seems to be inevitable. In so reacting it reverts to those of its fathers' fathers. Thus each generation tends to take the gods of its grandfathers from the shelf upon which its fathers have placed them.

To-day we are at the beginning of a period of reaction from the license of the war. The difference between young people of between the ages of eighteen and twenty-four and their predecessors of seven years ago is very marked. The latter were casual, offhand and easy going. They observed little ceremonial

THRASYMACHUS

in their relationships with each other, smoked, flirted and made love when and where they pleased, married in haste and repented at leisure or dispensed with marriage altogether, and despised rather than revered the aged to whom they were a constant source of horror and amazement. What is perhaps most noticeable about their successors to-day is their improvement in manners. They are chivalrous to women, considerate to the old, maintain a decorum at dances which is positively Victorian, and instead of hastening to establish sexual relations with whomsoever attracts them, have actually gone out of their way to postpone the fruition of their desires by a reintroduction of the rite known as "engagement".

In particular women, no longer treated as the equals of men, are alternatively worshipped and disregarded, blown aloft like soap bubbles or jettisoned as lumber. The reaction, in short, is already well under weigh, and its influence for many years to come will be great.

But the normal cycle of action and reaction, of licentious eighteenth and Puritanical nineteenth centuries, depends for its recurrence on the entrance of no new factors ; it is bound up that is to say with the property status of women and the production of children as the fruit of sexual intercourse. Once new factors

THE FUTURE OF MORALS

are introduced, it may well be thrown permanently out of gear. Birth control and the economic independence of women are to my mind factors of this kind. The changes they portend are incalculable, and, though their full effects may be delayed for two or three decades, no Puritan revival nor any number of such revivals, whether backed by the law or finding expression in public opinion merely, will in the long run be able to stand against them.

I am conscious that what I have written in this book will seem to many to be cynical and disruptive. I shall be charged with taking a low view of human nature, and speaking slightly of morality. My answer is first, that what I have written of in these pages is not human nature as a whole, but that part of human nature only which expresses itself in what is called morality, and secondly, that what is called morality is not in any true sense of the word morality at all. Morality, as I understand it, is positive, it insists that certain things are good and ought to be pursued even if the heavens fall. But the habits of thought and standards of conduct I have analysed in this book, although they are called morality, are not positive but negative. Their appeal is to men's fears rather than to their hopes ;

THRASYMACHUS

they tell them not what they must do to be saved, but what they must not do if they are to avoid the censure of society. Their basis is the instinct to possess, and their weapon the power to blame. Men blame those who claim a liberty they dare not assert for themselves, and dignify with the name of morality the indulgence of possessive instincts in which savages glory without hypocrisy. "What could I have done in the circumstances?" asked the husband of an erring wife in a recent society scandal case, "If you ask me to tell you I will. You could have told your wife that if she went with the man again, you would get her divorced. You could then have gone up to London and assaulted Sir X Y, and to hell with your career" replied the eminent counsel on the other side.

This is the law of the jungle; it is the expression of most of what passes for morality to-day, and, while it prevails, there is little hope for the world. Of positive morality which brings the conviction that some things are good and ought to be pursued for their own sake, there has never been less. It is doubtful indeed whether a positive morality can exist without a strong and lively religious feeling, and religion was never at so low an ebb.

The emotional enthusiasm which religion

THE FUTURE OF MORALS

generates is indispensable to a true morality. For good or for evil religion is the looser of great forces. It may be captured and made to serve base ends, but under the influence of the emotion which it creates, men can be brought to believe that some things *are* better than others, and to overcome any obstacle in order that the good things may prevail. It is this belief which is lacking in the world to-day.

Until, then, the life force can contrive again to send a great religious teacher into the world, a true, positive morality will be lacking. The man who is born in England will continue to believe that it is right to marry one wife, and the man who is born in Persia will continue to believe that it is right to marry four, and each will invoke morality to justify his belief. Such morality is merely topographical; it reflects no conception of what is good, and it gives us no hope that the world can be made better because it does not believe that its own world is bad.

Meanwhile the less we write and think about morality the better. A world without religion is a sad and a tiring world because it lacks an object, and for this reason there have been few generations which have known less happiness than our own. In such a world those who think the least have the best of it. In such a

THRASYMACHUS

world reflection can only produce despondency, and it is better to take our professions and prejudices ready made from the social shop, than to embark on a sea of troubles by thinking out a morality for ourselves, to act with the business man rather than to brood with the philosophers.

In a new and positive morality in which men can believe lies the hope for the world, yet such a morality cannot come without a revival of religion. Religion and religion alone gives the driving force which impels men to change things, and until a religious attitude to the world again becomes part of man's common heritage, all the apparent changes in morality, of which different ages and countries are the witnesses, will fail to disguise the fundamental fact that there is no morality to change.

"A precious document upon
the present time"—NATION

TO-DAY AND TO-MORROW

Each, pott 8vo, boards, 2/6 net

THIS series of books, by some of the most distinguished English thinkers, scientists, philosophers, doctors, critics, and artists, was at once recognized as a noteworthy event. Written from various points of view, one book frequently opposing the argument of another, they provide the reader with a survey of numerous aspects of most modern thought.

"That very lively and courageous series."
—*Spectator*. "A remarkable series."
—*Observer*. "This admirable series of provocative and brilliant essays."
—*Daily Telegraph*. "We have long desired to express deep admiration for this series. We must pay tribute to the high standard of thought and expression they maintain."
—*Field*.

TO-DAY AND TO-MORROW

VOLUMES IN PREPARATION

Pandarus, or the Future of Traffic in Women. By H. WILSON HARRIS, author of 'Human Merchandise'.

Can the trade in women be suppressed, and what would be the consequences ?

Automaton, or the Future of the Mechanical Man. By H. STAFFORD HATFIELD

Which of man's material needs can be satisfied by machinery ?

Hestia, or the Future of Home Life. By WINIFRED SPIELMAN.

Will the home disrupt and home life vanish ?

Achates, or the Future of Canada in the Empire. By W. ERIC HARRIS.

An answer to *Columbia* (page 24)

The Future of India. By R. J. MINNEY.

The Future of Socialism. By ARTHUR SHADWELL.

The Future of Opera. By DYNELEY HUSSEY, author of 'Mozart'.

The Future of the Sexes. By REBECCA WEST.

TO-DAY AND TO-MORROW

"An entertaining series of vivacious and stimulating studies of modern tendencies"—TIMES LITERARY SUPPLEMENT.

VOLUMES READY

Daedalus, or Science and the Future.
By J. B. S. HALDANE, Reader in Biochemistry, University of Cambridge.
Eighth impression.

"A fascinating and daring little book"—*Westminster Gazette* "The essay is brilliant, sparkling with wit and bristling with challenges"—*British Medical Journal*.

"Predicts the most startling changes."—*Morning Post*.

Icarus, or the Future of Science. By BERTRAND RUSSELL, F.R.S. *Fourth impression.*

"Utter pessimism"—*Observer*. "Mr Russell refuses to believe that the progress of Science must be a boon to mankind."—*Morning Post* "A stimulating book, that leaves one not at all discouraged."—*Daily Herald*.

What I Believe. By BERTRAND RUSSELL, F.R.S. *Fourth impression.*

"One of the most brilliant and thought-stimulating little books I have read—a better book even than *Icarus*"—*Nation*. "Simply and brilliantly written."—*Nature*. "In stabbing sentences he punctures the bubble of cruelty, envy, narrowness, and ill-will which those in authority call their morals."—*New Leader*.

TO-DAY AND TO-MORROW

Callinicus, a Defence of Chemical Warfare. By J. B. S. HALDANE. *Second impression.*

"Mr Haldane's brilliant study."—*Times Leading Article*. "A book to be read by every intelligent adult."—*Spectator*. "This brilliant little monograph."—*Daily News*.

Tantalus, or the Future of Man. By F. C. S. SCHILLER, D.Sc., Fellow of Corpus Christi College, Oxford. *Second impression.*

"They are all (*Daedalus*, *Icarus*, and *Tantalus*) brilliantly clever, and they supplement or correct one another."—*Dean Inge*, in *Morning Post*. "Immensely valuable and infinitely readable"—*Daily News*. "The book of the week."—*Spectator*.

Cassandra, or the Future of the British Empire. By F. C. S. SCHILLER, D.Sc. *Second impression.*

"We commend it to the complacent of all parties."—*Saturday Review*. "The book is small, but very, very weighty; brilliantly written, it ought to be read by all shades of politicians and students of politics."—*Yorkshire Post*. "Yet another addition to that bright constellation of pamphlets."—*Spectator*

Quo Vadimus? Glimpses of the Future. By E. E. FOURNIER D'ALBE, D.Sc. *Second impression.*

"A wonderful vision of the future. A book that will be talked about."—*Daily Graphic*. "A remarkable contribution to a remarkable series."—*Manchester Dispatch*. "Interesting and singularly plausible."—*Daily Telegraph*

TO-DAY AND TO-MORROW

Thrasymachus, the Future of Morals.

By C. E. M. JOAD. *Second impression.*

"His provocative book."—*Graphic*
"Written in a style of deliberate brilliance."
—*Times Literary Supplement* "As outspoken and unequivocal a contribution as could well be imagined. Even those readers who dissent will be forced to recognize the admirable clarity with which he states his case. A book that will startle."—*Daily Chronicle.*

Lysistrata, or Woman's Future and Future Woman. By ANTHONY M. LUDOVICI, author of "A Defence of Aristocracy," etc. *Second impression.*

"A stimulating book. Volumes would be needed to deal, in the fulness his work provokes, with all the problems raised"—*Sunday Times* "Pro-feminine but anti-feministic"—*Scotsman* "Full of brilliant common-sense."—*Observer*

Hypatia, or Woman and Knowledge. By MRS BERTRAND RUSSELL. With a frontispiece. *Third impression.*

An answer to *Lysistrata*. "A passionate vindication of the rights of woman"—*Manchester Guardian* "Says a number of things that sensible women have been wanting publicly said for a long time"—*Daily Herald*

Hephaestus, the Soul of the Machine.

By E. E. FOURNIER D'ALBE, D.Sc.

"A worthy contribution to this interesting series. A delightful and thought-provoking essay."—*Birmingham Post.* "There is a special pleasure in meeting with a book like *Hephaestus*. The author has the merit of really understanding what he is talking about."—*Engineering.* "An exceedingly clever defence of machinery."—*Architects' Journal.*

TO-DAY AND TO-MORROW

The Conquest of Cancer. By H. W. S. WRIGHT, M.S., F.R.C.S. Introduction by F. G. CROOKSHANK, M.D.

"Eminently suitable for general reading. The problem is fairly and lucidly presented. One merit of Mr Wright's plan is that he tells people what, in his judgment, they can best do, *here and now*"—From the *Introduction*.

Pygmalion, or the Doctor of the Future. By R. MCNAIR WILSON, M.B.

"Dr Wilson has added a brilliant essay to this series"—*Times Literary Supplement*

"This is a very little book, but there is much wisdom in it"—*Evening Standard*. "No doctor worth his salt would venture to say that Dr Wilson was wrong"—*Daily Herald*.

Prometheus, or Biology and the Advancement of Man. By H. S. JENNINGS, Professor of Zoology, Johns Hopkins University. *Second impression.*

"This volume is one of the most remarkable that has yet appeared in this series. Certainly the information it contains will be new to most educated laymen. It is essentially a discussion of . . . heredity and environment, and it clearly establishes the fact that the current use of these terms has no scientific justification"—*Times Literary Supplement*

"An exceedingly brilliant book."—*New Leader*

Galatea, or the Future of Darwinism. By W. RUSSELL BRAIN.

"A brilliant exposition of the present position of the evolutionary hypothesis, he writes clearly and temperately"—*Guardian*.

"Should prove invaluable. A stimulating and well-written essay"—*Literary Guide*

"His destructive criticism of the materialist and mechanist philosophy, biology, and physics is superb"—*G. K.'s Weekly*.

TO-DAY AND TO-MORROW

Narcissus : an Anatomy of Clothes. By
GERALD HEARD. With 19 illustrations.
Second impression.

"A most suggestive book"—*Nation*.
"Irresistible Reading it is like a switchback
journey. Starting from prehistoric times we
rocket down the ages"—*Daily News*.
"Interesting, provocative, and entertaining."
—*Queen*.

Thamyris, or Is There a Future for
Poetry? By R. C. TREVELYAN.

"Learned, sensible, and very well-written"
—*Affable Hawk*, in *New Statesman*. "Very
suggestive."—*J. C. Squire*, in *Observer*.
"A very charming piece of work, I agree
with all, or at any rate, almost all its con-
clusions."—*J. St. Loe Strachey*, in *Spectator*.

Proteus, or the Future of Intelligence.
By VERNON LEE, author of "Satan the
Waster," etc.

"We should like to follow the author's
suggestions as to the effect of intelligence on
the future of Ethics, Aesthetics, and Manners.
Her book is profoundly stimulating and should
be read by everyone"—*Outlook*. "A concise,
suggestive piece of work"—*Saturday Review*.

Timotheus, the Future of the Theatre.
By BONAMY DOBRÉE, author of "Restor-
ation Drama," etc.

"A witty, mischievous little book, to be
read with delight."—*Times Literary Supple-
ment*. "This is a delightfully witty book"
—*Scotsman*. "In a subtly satirical vein he
visualizes various kinds of theatres in 200 years'
time. His gay little book makes delightful
reading."—*Nation*.

TO-DAY AND TO-MORROW

Paris, or the Future of War. By Captain B. H. LIDDELL HART.

"A companion volume to *Callinicus*. A gem of close thinking and deduction"—*Observer* "A noteworthy contribution to a problem of concern to every citizen in this country"—*Daily Chronicle* "There is some lively thinking about the future of war in *Paris*, just added to this set of live-wire pamphlets on big subjects."—*Manchester Guardian*.

Wireless Possibilities. By Professor A. M. Low. With 4 diagrams.

"As might be expected from an inventor who is always so fresh, he has many interesting things to say"—*Evening Standard* "The mantle of Blake has fallen upon the physicists To them we look for visions, and we find them in this book"—*New Statesman*

Perseus : of Dragons. By H. F. SCOTT STOKES. With 2 illustrations.

"A diverting little book, chock-full of ideas Mr Stokes' dragon-lore is both quaint and various."—*Morning Post*. "Very amusingly written, and a mine of curious knowledge for which the discerning reader will find many uses"—*Glasgow Herald*.

Lycurgus, or the Future of Law. By E. S. P. HAYNES, author of "Concerning Solicitors," etc.

"An interesting and concisely written book"—*Yorkshire Post* "He roundly declares that English criminal law is a blend of barbaric violence, medieval prejudices and modern fallacies. . . . A humane and conscientious investigation."—*T.P.'s Weekly* "A thoughtful book—deserves careful reading."—*Law Times*.

TO-DAY AND TO-MORROW

Euterpe, or the Future of Art. By LIONEL R. MCCOLVIN, author of "The Theory of Book-Selection."

"Discusses briefly, but very suggestively, the problem of the future of art in relation to the public"—*Saturday Review*. "Another indictment of machinery as a soul-destroyer. Mr Colvin has the courage to suggest solutions"—*Westminster Gazette*. "This is altogether a much-needed book."—*New Leader*.

Pegasus, or Problems of Transport. By Colonel J. F. C. FULLER, author of "The Reformation of War," etc. With 8 Plates.

"The foremost military prophet of the day propounds a solution for industrial and unemployment problems. It is a bold essay . . . and calls for the attention of all concerned with imperial problems."—*Daily Telegraph*. "Practical, timely, very interesting and very important"—*J. St. Loé Strachey*, in *Spectator*.

Atlantis, or America and the Future. By Colonel J. F. C. FULLER.

"Candid and caustic."—*Observer*. "Many hard things have been said about America, but few quite so bitter and caustic as these"—*Daily Sketch*. "He can conjure up possibilities of a new Atlantis"—*Clarion*.

Midas, or the United States and the Future. By C. H. BRETHERTON, author of "The Real Ireland," etc.

A companion volume to *Atlantis*. "Full of astute observations and acute reflections . . . this wise and witty pamphlet, a provocation to the thought that is creative"—*Morning Post*. "A punch in every paragraph. One could hardly ask for more 'meat'."—*Spectator*.

TO-DAY AND TO-MORROW

Nuntius, or Advertising and its Future.
By GILBERT RUSSELL.

"Expresses the philosophy of advertising concisely and well"—*Observer*. "It is doubtful if a more straightforward exposition of the part advertising plays in our public and private life has been written"—*Manchester Guardian*.

Birth Control and the State: a Plea and a Forecast. By C. P. BLACKER, M.C., M.A., M.R.C.S., L.R.C.P.

"A very careful summary"—*Times Literary Supplement*. "A temperate and scholarly survey of the arguments for and against the encouragement of the practice of birth control"—*Lancet*. "He writes lucidly, moderately, and from wide knowledge; his book undoubtedly gives a better understanding of the subject than any other brief account we know. It also suggests a policy."—*Saturday Review*.

Ouroboros, or the Mechanical Extension of Mankind. By GARET GARRETT.

"This brilliant and provoking little book"—*Observer*. "A significant and thoughtful essay, calculated in parts to make our flesh creep"—*Spectator*. "A brilliant writer, Mr Garrett is a remarkable man. He explains something of the enormous change the machine has made in life"—*Daily Express*.

Artifex, or the Future of Craftsmanship
By JOHN GLOAG, author of "Time, Taste, and Furniture."

"An able and interesting summary of the history of craftsmanship in the past, a direct criticism of the present, and at the end his hopes for the future. Mr Gloag's real contribution to the future of craftsmanship is his discussion of the uses of machinery."—*Times Literary Supplement*.

TO-DAY AND TO-MORROW

Plato's American Republic. By J. DOUGLAS WOODRUFF. *Fourth impression.*

"Uses the form of the Socratic dialogue with devastating success. A gently malicious wit sparkles in every page"—*Sunday Times*.
"Having deliberately set himself an almost impossible task, has succeeded beyond belief"—*Saturday Review*. "Quite the liveliest even of this spirited series."—*Observer*.

Orpheus, or the Music of the Future. By W. J. TURNER, author of "Music and Life." *Second impression.*

"A book on music that we can read not merely once, but twice or thrice. Mr Turner has given us some of the finest thinking upon Beethoven that I have ever met with."—*Ernest Newman in Sunday Times*. "A brilliant essay in contemporary philosophy"—*Outlook*. "The fruit of real knowledge and understanding"—*New Statesman*.

Terpander, or Music and the Future. By E. J. DENT, author of "Mozart's Operas."

"In *Orpheus* Mr Turner made a brilliant voyage in search of first principles. Mr Dent's book is a skilful review of the development of music. It is the most succinct and stimulating essay on music I have found. . . ."—*Musical News*. "Remarkably able and stimulating"—*Times Literary Supplement*. "There is hardly another critic alive who could sum up contemporary tendencies so neatly"—*Spectator*.

Sibylla, or the Revival of Prophecy. By C. A. MACE, University of St. Andrew's.

"An entertaining and instructive pamphlet"—*Morning Post*. "Places a nightmare before us very ably and wittily."—*Spectator*. "Passages in it are excellent satire, but on the whole Mr Mace's speculations may be taken as a trustworthy guide . . . to modern scientific thought."—*Birmingham Post*.

TO-DAY AND TO-MORROW

Lucullus, or the Food of the Future. By OLGA HARTLEY and MRS C. F. LEVEL, authors of "The Gentle Art of Cookery."

"This is a clever and witty little volume in an entertaining series, and it makes enchanting reading"—*Times Literary Supplement*.

"Opens with a brilliant picture of modern man, living in a vacuum-cleaned, steam-heated, credit-furnished suburban mansion 'with a wolf in the basement'—the wolf of hunger. This banquet of epigrams"—*Spectator*.

Procrustes, or the Future of English Education. By M. ALDERTON PINK.

"Undoubtedly he makes out a very good case"—*Daily Herald*. "This interesting addition to the series."—*Times Educational Supplement*. "Intends to be challenging and succeeds in being so. All fit readers will find it stimulating"—*Northern Echo*.

The Future of Futurism. By JOHN RODKER.

"Mr Rodker is up-to-the-minute, and he has accomplished a considerable feat in writing on such a vague subject, 92 extremely interesting pages."—*T. S. Eliot*, in *Nation*. "There are a good many things in this book which are of interest"—*Times Literary Supplement*.

Pomona, or the Future of English. By BASIL DE SÉLINCOURT, author of "The English Secret," etc.

"The future of English is discussed fully and with fascinating interest."—*Morning Post*. "Full of wise thoughts and happy words."—*Times Literary Supplement*. "His later pages must stir the blood of any man who loves his country and her poetry."—*J. C. Squire*, in *Observer*. "His finely-conceived essay."—*Manchester Guardian*.

TO-DAY AND TO-MORROW

Balbus, or the Future of Architecture.

By CHRISTIAN BARMAN.

"A really brilliant addition to this already distinguished series. The reading of *Balbus* will give much data for intelligent prophecy, and incidentally, an hour or so of excellent entertainment"—*Spectator* "Most readable and reasonable. We can recommend it warmly"—*New Statesman* "This intriguing little book"—*Connoisseur*.

Apella, or the Future of the Jews. By A QUARTERLY REVIEWER.

"Cogent, because of brevity and a magnificent prose style, this book wins our quiet praise. It is a fine pamphlet, adding to the value of the series, and should not be missed."—*Spectator*. "A notable addition to this excellent series. His arguments are a provocation to fruitful thinking"—*Morning Post*

The Dance of Civa, or Life's Unity and Rhythm. By COLLUM.

"It has substance and thought in it. The author is very much alive and responsive to the movements of to-day."—*Spectator*. "A very interesting account of the work of Sir Jagadis Bose"—*Oxford Magazine*. "Has caught the spirit of the Eastern conception of world movements."—*Calcutta Statesman*.

Lars Porsena, or the Future of Swearing and Improper Language. By ROBERT GRAVES. *Fourth impression.*

"Goes uncommonly well, and deserves to"—*Observer*. "Not for squeamish readers."—*Spectator*. "No more amusingly unexpected contribution has been made to this series. A deliciously ironical affair."—*Bystander*. "His highly entertaining essay is as full as the current standard of printers and police will allow."—*New Statesman*. "Humour and style are beyond criticism."—*Irish Statesman*

TO-DAY AND TO-MORROW

Socrates, or the Emancipation of Mankind. By H. F. CARLILL.

"Devotes a specially lively section to the herd instinct"—*Times* "Clearly, and with a balance that is almost Aristotelian, he reveals what modern psychology is going to accomplish"—*New Statesman* "One of the most brilliant and important of a remarkable series."—*Westminster Gazette*.

Delphos, or the Future of International Language. By E. SYLVIA PANKHURST.

"Equal to anything yet produced in this brilliant series Miss Pankhurst states very clearly what all thinking people must soon come to believe, that an international language would be one of the greatest assets of civilization"—*Spectator* "A most readable book, full of enthusiasm, an important contribution to this subject"—*International Language*.

Gallio, or the Tyranny of Science. By J. W. N. SULLIVAN, author of "A History of Mathematics"

"So packed with ideas that it is not possible to give any adequate *résumé* of its contents"—*Times Literary Supplement* "His remarkable monograph, his devastating summary of materialism, this pocket *Novum Organum*."—*Spectator* "Possesses a real distinction of thought and manner. It must be read"—*New Statesman*.

Apollonius, or the Future of Psychological Research. By E. N. BENNETT, author of "Problems of Village Life," etc.

"A sane, temperate and suggestive survey of a field of inquiry which is slowly but surely pushing to the front."—*Times Literary Supplement*. "His exposition of the case for psychic research is lucid and interesting."—*Scotsman*. "Displays the right temper, admirably conceived, skilfully executed."—*Liverpool Post*

TO-DAY AND TO-MORROW

Aeolus, or the Future of the Flying Machine. By OLIVER STEWART.

"Both his wit and his expertness save him from the nonsensical-fantastic. There is nothing vague or sloppy in these imaginative forecasts"—*Daily News* "He is to be congratulated His book is small, but it is so delightfully funny that it is well worth the price, and there really are sensible ideas behind the jesting"—*Aeroplane*.

Stentor, or the Press of To-Day and To-Morrow. By DAVID OCKHAM.

"A valuable and exceedingly interesting commentary on a vital phase of modern development"—*Daily Herald*. "Vigorous and well-written, eminently readable"—*Yorkshire Post* "He has said what one expects any sensible person to say about the 'trustification of the Press' "—*Spectator*

Rusticus, or the Future of the Countryside. By MARTIN S. BRIGGS, F.R.I.B.A.

"Few of the 50 volumes, provocative and brilliant as most of them have been, capture our imagination as does this one."—*Daily Telegraph*. "The historical part is as brilliant a piece of packed writing as could be desired"—*Daily Herald* "Serves a national end. The book is in essence a pamphlet, though it has the form and charm of a book"—*Spectator*.

Janus, or the Conquest of War. By WILLIAM MCDUGALL, M.B., F.R.S.

"Among all the booklets of this brilliant series, none, I think is so weighty and impressive as this It contains thrice as much matter as the other volumes, and is profoundly serious"—*Dian Inge*, in *Evening Standard*. "A deeply interesting and fair-minded study of the causes of war and the possibilities of their prevention. Every word is sound."—*Spectator*.

TO-DAY AND TO-MORROW

Vulcan, or the Future of Labour. By
CECIL CHISHOLM.

"Of absorbing interest."—*Daily Herald*
"No one, perhaps, has ever held the balance so nicely between technicalities and flights of fancy, as the author of this excellent book in a brilliant series. Between its covers knowledge and vision are pressed down and brimming over."—*Spectator*.

Hymen, or the Future of Marriage. By
NORMAN HAIRE. *Second impression*.

"Has something serious to say, something that may be of value, Dr Haire is, fortunately, as lucid as he is bold"—*Saturday Review*
"An electrifying addition to the series"—*Sphere*. "Not cheerful reading Yet in spite of this we feel that the book repays perusal"—*Spectator*. "A very good book, brilliant, arresting"—*Sunday Worker*.

The Next Chapter: the War against the Moon. By ANDRÉ MAUROIS.

"This delicate and delightful phantasy presented with consummate art"—*Spectator*
"Short but witheringly sarcastic."—*Field*
"Admirably parodies the melancholy and superior tone of a history-book . . ."—*Times Literary Supplement* "A delicious skit on the newspaper 'stunt', and a wholesome satire on some of the abiding weaknesses of mankind."—*Daily Telegraph*

Archon, or the Future of Government. By HAMILTON FYFE.

"Well written and abounds in epigram This is a brave and sincere book."—*Economic Review*. "As stern a critic of our present Party system as any Tory could be."—*H. W. Nevinnson*, in *Daily Herald*. "A brochure that thinking people will discuss."—*Spectator*
"A timely exposure of the hypocrisy of politics."—*Harold Cox*, in *Sunday Times*.

TO-DAY AND TO-MORROW

Scheherazade, or the Future of the English Novel. By JOHN CARRUTHERS.

"An entertaining and stimulating book which no novel-reader should fail to study."—*Osbert Sitwell*, in *Daily Mirror*. "A brilliant essay and, I think, a true one. It deserves the attention of all in any way interested critically in the novel"—*Geoffrey West*, in *Daily Herald*.

Iconoclastes, or the Future of Shakespeare. By HUBERT GRIFFITH.

"To my disappointment I found myself in complete agreement with nearly all its author's arguments. There is much that is vital and arresting in what he has to say"—*Nigel Playfair*, in *Evening Standard*. "With much that Mr Griffith says I entirely agree"—*Saturday Review*.

Caledonia, or the Future of the Scots. By G. M. THOMSON. *Second impression*.

"Not since the late T. W. H. Crosland has anything like so amazing an indictment of Scotland appeared."—*Westminster Gazette*. "It is relentless and terrible in its exposure of the realities that underlie the myth of the canny Scot'. I have found scarcely an exaggeration in the whole of this brilliant book"—*Irish Statesman*. "As a piece of incisive writing and powerful, though restrained, invective, *Caledonia* is specially notable"—*Spectator*.

Albyn, or Scotland and the Future. By C. M. GRIEVE, author of 'Contemporary Scottish Studies,' etc.

"A vigorous answer, explicit and implicit, to *Caledonia*, tracing behind the scenes the development of a real Scottish renaissance. Contains stuff for thought."—*Spectator*. "The book of a man genuinely concerned about the future."—*Glasgow News*.

TO-DAY AND TO-MORROW

Bacchus, or the Future of Wine. By
P. MORTON SHAND.

"Very sound sense."—*Times Literary Supplement* "A learned and amusingly written book on wine"—*Daily Express*.
"An entrancing little volume, prognosticating the future of wine and wine-drinking, from a social, commercial, and more especially a vinous point of view."—*Brewer and Wine Merchant*.

Hermes, or the Future of Chemistry.
By T. W. JONES, B.Sc., F.C.S.

"Tells us briefly, yet with brilliant clarity, what Chemistry is doing to-day, and what its achievements are likely to be in the future"—*Morning Post* "A complete and readable survey of the chemical developments of to-day, making special reference to bio-chemistry, synthetic fuels, and catalysts."—*Manchester Guardian*

Archimedes, or the Future of Physics.
By L. L. WHYTE.

"If the notion [of asymmetrical time] can be successfully applied to physics itself, the universal science will be born. That some great synthesis is on the way seems clear. One of the most suggestive accounts of it may be found in this fascinating volume"—*Times Literary Supplement*. "This book will be an inspiration. The writer is a clear and fearless thinker"—*Discovery*.

Atalanta, or the Future of Sport. By
G. S. SANDILANDS.

"His provocative and most interesting book."—*Daily Herald* "A candid and outspoken personage with a talent for pungency in epigram. He covers the whole field"—*Sheffield Telegraph* "Points out some of the pinnacles of unreason climbed by those trying to separate amateur from professional."—*Manchester Guardian*.

TO-DAY AND TO-MORROW

Lares et Penates, or the Home of the Future. By H. J. BIRNSTINGL.

"Indicating vividly what may lie ahead if we allow our worship of the American ideal of industrial output for its own sake to proceed undirected"—*Country Life* "A piquant study of the labour-saving houses of the future"—*T P's Weekly* "Draws an appalling picture"—*Evening Standard*

Breaking Priscian's Head, or English as She will be Spoke and Wrote. By J. Y. T. GREIG, D.Litt.

"His vivacious book"—*Daily Mail* "The most vehement attack [on standard English] we have ever read We are equally amazed and amused"—*Morning Post* "Very sensible suggestions for vivifying the English language"—*Star* "Such a rollicking book He must be thanked."—*Spectator*

Cain, or the Future of Crime. By GEORGE GODWIN.

"Compels the reader to think, whether he will or no"—*Saturday Review* "A most interesting prophecy. Mr Godwin makes out a strong case against the stupidity and cruelty of our present dealings with crime"—*Evening Standard*. "Cheerfully devastating"—*Daily Herald*. "His admirable book"—*Outlook*.

Morpheus, or the Future of Sleep. By DAVID FRASER-HARRIS, M.D., D.Sc.

"An interesting volume"—*Daily Mirror* "Shews that the doctors do not as yet know much about the subject"—*Queen* "His arguments, clearly and ably presented, hold our interest This is a book full of sound thinking and wise instruction."—*Clarion*.

TO-DAY AND TO-MORROW

Hibernia, or the Future of Ireland. By
BOLTON C. WALLER.

"An earnest and challenging piece of work"—*Irish Times* "A serious, practical book, full of knowledge"—*Spectator* "Well-written, suggestive, and thoughtful, it should have a great circulation"—*Irish News* "Notable in a notable series"—*Foreign Affairs* "A full and hopeful picture"—*Daily Herald*

Hanno, or the Future of Exploration.
By J. LESLIE MITCHELL.

"His wonderful little book, in which he confutes the popular notion that the explorer's task is finally fulfilled"—*Morning Post* "Stimulating, packed with eminently practical suggestions"—*Times Literary Supplement* "His amusing and suggestive essay"—*Sphere*.

Metanthropos, or the Body of the Future.
By R. CAMPBELL MACFIE, LL.D.

"An exceptionally stimulating book, the work of a clear and imaginative thinker who can express his thoughts"—*Saturday Review* "Should certainly be read by a large public"—*Lancet* "Discourses wisely and humorously upon the changes which modern forms of civilization are likely to bring about in our bodily structure"—*New Leader*

JUST PUBLISHED

Heraclitus, or the Future of the Films.
By ERNEST BETTS.

The writer traces the development of the film from its crude but astonishing beginnings as a 'show' to its future as one of the artistic marvels of the world. The film as an art form, it is contended, really began without any inspiration.

TO-DAY AND TO-MORROW

Fortuna, or Chance and Design. By
NORWOOD YOUNG.

This is a study of the paradoxical 'laws of chance', as illustrated in the game of roulette. It refutes the common belief, upon which all systems of gambling are founded, that in a game of chance the past can affect the future, and considers the emotions of gamblers, their hopes, and superstitions.

Autolycus, or the Future for Miscreant Youth. By R. G. GORDON, M.D., D.Sc.

What can the medical profession, the social worker, the school teacher, the parent, and the general public do to help the youthful delinquent? Methods are outlined of dealing with this urgent and difficult problem.

Diogenes, or the Future of Leisure. By
C. E. M. JOAD.

Our present conceptions of leisure are subjected to a scathing indictment. The cardinal error of our age is to suppose that pleasure may be purchased. The economic millennium of Socialism would bring a great increase of leisure, and the author paints a terrifying picture of what might then happen.

Eos, or the Wider Aspects of Cosmogony.
By SIR J. H. JEANS, LL.D., F.R.S.

With 6 Plates

Is this universe permanent or transitory? If transitory, is it near its end or just beginning? Where does life stand in relation to the stupendous mass of inert matter? Is life common or rare? Is terrestrial life beginning or ending its existence? These and other problems are lucidly dealt with in this fascinating book.

TO-DAY AND TO-MORROW

NEARLY READY

Mrs Fisher, or the Future of Humour.

By ROBERT GRAVES, author of 'Lars Porsena', etc

This volume, as amusing and witty as the now famous *Lars Porsenn*, is concerned with the sense of humour. Full of good stories and provocative attack, it ranges over a wide field of contemporary life

Alma Mater, or the Future of Oxford and Cambridge. By JULIAN HALL

This study of modern youth describes the University as this generation has made it. It sees the University of to-morrow as a research station with students. Every station will be in touch with similar institutions, thus forming one gigantic world-university

Eutychus, or the Future of the Pulpit
By WINIFRED HOLTBY.

A dialogue between Archbishop Fénelon, who stands for the great ecclesiastical tradition of preaching, Anthony, who stands for the more superficial intellectual movements in England, and Eutychus, the ordinary man, investigates the nature of the pulpit

Columbia, or the Future of Canada. By
GEORGE GODWIN, author of 'Cain'.

The future of Canada is worked out from the political, economic, social, and other view points. The possibility of Canada's union with America is discussed

Romulus, or the Future of the Child.
By ROBERT T. LEWIS.

How will the child live in the future, how will he be treated by parents, nurse and school, what will education become?
